INTRODUCTION

Vermont is a mostly rural state located between the large metropolitan areas of Boston, New York and Montreal. The Vermont economy depends on a diversified mix of manufacturing, private education, health care, tourism, professional services and public sector employers. Agriculture is an important component of the state's culture. While its direct economic impact has declined in recent decades, changing food preferences and the Farm to Plate initiative have created renewed interest.

The Vermont labor force grew steadily at the start of the new millennium culminating in the attainment of an all-time high in April of 2009. For the early part of the decade (2000-06), jobs mirrored the growth witnessed in the labor force. However due to the global economic downturn, Vermont witnessed a divergence in job creation and labor force participation. The differential resulted in increased unemployment as Vermont's unemployment rate peaked at 7.2% in 2009.

Since that time, the statewide unemployment rate has steadily declined. Over the past two years both the state and the national unemployment rate have improved with Vermont's rate falling to 4.0% and the national rate falling to 7.5% (April, 2013). Much of the decline in the unemployment rate is attributable to a declining labor force. The 'Great Recession' officially ended in June 2009, though the subsequent national economic expansion continues to be uneven and relatively weak.

In northwestern Vermont, Chittenden County provides approximately one third of the state's jobs and serves as the economic hub of the Vermont

economy. Burlington and South Burlington make up the hub of the state's only Metropolitan Statistical Area (MSA). The area employs thousands of workers in retail, construction, manufacturing, education, health care and tourism industries. The MSA extends into parts of Franklin, Grand Isle and Addison counties.

Southern Vermont has worked to maintain a balance between economic development and preservation of the rural working landscape. Easy access from northeastern urban centers (Boston, New York City, etc.) has put pressure on the region for second home development. In addition, ski resorts in the area have expanded to provide self-contained winter recreation facilities. The area along the Connecticut River has close ties to neighboring New Hampshire communities. The northern part of Windsor County benefits from its proximity to Hanover, New Hampshire, which employs many workers in education and health care.

Bennington County, in the southwestern corner of the state, provides a wide range of recreation and tourist activities. It is a popular area with visitors from adjoining New York State. The county also is home to many manufacturing, retail and health care employers.

While central Vermont is well known because of the capital city, Montpelier, the region also contains a diverse economy with an interesting industrial history. Granite quarries provide stone for monuments and construction all over the world. Granite workers pass on a tradition of craftsmanship that turns granite slabs into works of art. In addition to its large public sector government employers, the central Vermont area has strong insurance and financial services sectors, and

many health care and social assistance employers.

Lamoille County in north central Vermont has a high concentration of service industry jobs related to seasonal recreation and tourism. Recent resort expansion and development has provided construction and retail jobs for the area.

Essex, Orleans and Caledonia counties in northeastern Vermont, known collectively as the Northeast Kingdom, contain some of the last remnants of a rural, undeveloped New England. The forests provide income for loggers and serve as a resource for furniture and other wood product manufacturing—a critical part of the regional economy. Residents of the Kingdom report income levels among the lowest in the state and poverty rates among the highest. The recent announcement of a \$600 - \$800 million dollar Newport / Jay Peak EB-5 Expansion Project has the potential to significantly transform the economic landscape of the region.

POPULATION

The 2011 population of Vermont stood at 626,431, a 0.1% increase from 2010. Between 2000 and 2010 Vermont's population grew by 2.8% which translates to an annual growth rate of less than 0.3%. Comparatively, the United States grew by 9.7% over the same ten year period, an annual growth rate of 0.93%. Vermont's population is not anticipated to change significantly in the near future. This expectation has raised concerns about an aging workforce.

The stagnant population growth can be seen in more detail at the county level. From 2000 to 2010, three of Vermont's 14 counties experienced population declines. This includes: Essex, Rutland, and

Windsor counties.

Three of the four counties experiencing the largest population gains between 2000 and 2010 are part of or are in close proximity to the Burlington/South Burlington Labor Market Area. They include Chittenden, Lamoille, and Franklin counties with percent changes over the ten year period of 6.8%, 5.4% and 5.1% respectively. The other county with large population growth is Caledonia County at 5.1% making it the third highest rate of growth. The remaining seven counties ranged from marginal growth in Bennington County (0.4%) to modest growth in Orleans County (3.6%) (Table 16).

Chittenden County is home to four of the five largest cities and towns in Vermont. Burlington is the state's largest city with a population of 42,645 in 2011. Other large cities and towns in the county are Essex, South Burlington and Colchester. Rutland (Rutland County) and Bennington (Bennington County) are two other cities that have large populations comparable to some of those in Chittenden County (Tables 2-15).

Orleans, Essex and Caledonia counties, which comprise the Northeast Kingdom, remain sparsely populated with the largest towns being St. Johnsbury, Lyndon, Derby, and Newport City. Essex County is the least populated with 6,291 residents in 2011.

The most striking population statistics involve the aging of Vermont. The state has one of the oldest populations in the nation. Between 2000 and 2010, the two age cohorts with the largest percent increase were 55-64 years old and over 65 years old. The aging of the state could present a challenge to Vermont's workforce and health care system (Table 16).

According to 2010 Census data, Chittenden County has the lowest proportion of residents over the age of 55 (24.0%), while ten counties (Bennington, Caledonia, Essex, Grand Isle, Orange, Orleans, Rutland, Washington, Windham and Windsor) have in excess of 30% of their populations in the over 55 group. Franklin County has the highest concentration of children – both for children under five (6.0%) and school age children aged 5 to 19 (20.4%) (Table 16).

ECONOMIC TRENDS

Jobs in Vermont increased by 0.8% in 2011 as the local and national economy continued a slow and uneven recovery from the 'Great Recession'. This translates to an additional 2,449 jobs in the state's economy resulting in an overall total of 295,537 jobs (Table 18).

Between 2000 and 2010, the Vermont economy lost about 3,400 jobs, declining by 1.1% over the ten-year period. The number of jobs increased by 0.8% in 2011. Four counties experienced net job growth in 2011: Chittenden (2.5%), Lamoille (2.2%), Orleans (2.0%) and Addison (1.5%). Essex (-9.1%), Grand Isle (-3.7%), Franklin (-1.4%) and Bennington (-1.2%) all experienced job losses in 2011. The remaining counties experienced very small changes in employment levels. (Table 1).

The reported declines in employment by county between 2000 and 2010 are as result of the 'Great Recession' which masks the years of strong economic growth during the mid-2000s. While the two year period between 2009 and 2011 was positive for covered employment growth, the magnitude was not sufficient enough to overcome the large declines to covered employment between 2008 and 2009 as a result of the

significant national economic downturn.

Job growth during the 2010-2011 period was broad based across both service providing sectors and goods producing sectors. The only sectors to lose jobs were Durable goods manufacturing (-0.8%), Information (-7.7%), Finance & insurance (-0.6%) and Government (-0.9%) (Table 18).

The fastest growing sectors included Administrative and waste services (+850 jobs or 9.7%), Health care & social assistance (+401 or 0.9%) and Transportation and warehousing (+311 or 4.8%). The continued increase in Management of companies and enterprises does not necessarily constitute new employment to the Vermont economy. Instead, it is more indicative of changes to how the primary function of the Vermont operation(s) is coded as some Vermont-born firms have since expanded globally to merit headquarter operations within the state (Table 18). Construction added 537 jobs or 4.0%. It should be noted, however, that growth in construction employment was due in large part to the rebuilding efforts after the devastation of hurricane Irene.

Between 2010 and 2011, for the counties with data, six counties reported increases in overall manufacturing employment while seven counties reported declines. The county with the largest percent increase was Orleans County (16.0%) but due to the region's small size, this large percent increase is not significant. Orange County experienced the largest percent decline in manufacturing employment at -5.4% over this one year period (Tables 18-32).

Between 2010 and 2011, four counties reported decreases in construction employment while ten counties reported increases.

Franklin had the largest percent increase in construction employment (15.3%). The county with the largest percent decrease was Grand Isle County at -24.7% (Tables 18-32).

The state's accommodation and food service employment increased by 202 or 0.7%. On a county level, employment in this sector increased in eight counties and decreased in six. On a percentage basis, the biggest losses were in Rutland County where 7.5% or 243 jobs were lost. The largest percent gains were in Orleans County (11.5% or 99 jobs), Orange County (6.6% or 33 jobs) and Caledonia County (4.9% or 37 jobs). Chittenden County experienced an increase of 218 jobs but its relatively large population means that such a large gain only accounted for a 2.8% increase (Tables 18-32).

Vermont's agricultural base has experienced significant transformation in recent decades due to the modernization of daily operations and more recently from weather related events. The latest agriculture statistics come from the 2007 Census of Agriculture. Between 2002 and 2007 the number of hired agricultural workers increased by 9.3%. Over this same time period, Vermont's farm acreage declined nearly 1%. Rutland and Washington counties experienced the greatest increases in hired workers - each increasing by approximately two thirds during the five-year period. All fourteen counties experienced increases in agricultural products and dairy products sold. Dairy farming still dominates the state's agricultural sector and contributes to its non-durable goods manufacturing sector (Table 33).

The state's forest industry decreased total production between 2010 and 2011 – with both hardwood and softwood

harvests reporting declines during this time period. Windham, Rutland and Windsor Counties produced the most hardwood in Vermont in 2011 (in that order). Each contributed more than 10% of the state's total harvest. Essex and Orleans produced the most softwood (Table 34) with Caledonia, Windsor and Windham also contributing more than 10% of the state total

Unemployment

Vermont's unemployment rate has fallen significantly since the most recent recession. After averaging 6.4% in 2010, the rate fell to an average of 5.6% in 2011 and 5.0% in 2012 (Table 18). Current estimates show the trend continuing in 2013. As it has been throughout the recession and recovery, the state level is well below the national unemployment rate, ranked as fourth lowest in the nation in December 2012.

Across Vermont's counties, unemployment in 2012 ranged from a low of 4.0% in Chittenden County to a high of 7.3% in Orleans. Every county experienced a drop in the unemployment rate from 2011 to 2012, with Grand Isle's drop from 6.9% to 5.9% being the largest. The smallest drop was in Caledonia, where the rate fell one tenth of one percent from 6.5 to 6.4%.

Wages

The average annual wage in Vermont rose to \$40,284 in 2011, an increase of \$859 or 2.2% compared to 2010. The highest wages continue to be in Chittenden County, where the average annual wage of \$46,857 is more than 16% above the statewide average. At \$42,023, Washington County is the only other county to have an average wage above the statewide average.

The lowest average wages were in Grand Isle (\$29,893) and Essex (\$32,069). Average wages are influenced not only by the mix of industries and occupations in an area, but also other economic factors such as the proportion of part-time and seasonal jobs. Although they may pay a competitive hourly wage, part-time and seasonal jobs would lower the annual average versus a full-time job, all else equal (Table 1).

In 2011, Vermont's per capita income was \$41,572. This represents a 4.6% increase from 2010 levels. Per capita income is equal to total personal income divided by total resident population. It is a broader measure of financial well-being than wages because it includes various non-wage items such as dividends, rents and government transfer payments. Income is based on the total resident population, while average wage is reported by the employer and measures only income related to hourly or annual wages (Table 1).

Taxes

As in years past, over one-third (35%) of Vermont's Personal Income taxes came from the residents of Chittenden County in 2011. The combination of Chittenden's large population and relatively high income levels result in large revenue generation from the county. Washington County had the second highest Personal Income tax revenue with 10.1% of the state's total. Chittenden County also contributed the most to the state's Sales and Use taxes (27.4%), Rooms and Meals taxes (29.7%), and Property Transfer taxes (33.9%). Rutland County was the second highest contributor to both the Sales and Use taxes with a 9.7% share of the state's total and Rooms and Meals tax with 9.6%. Windsor County

generated the second highest amount of Property Transfer tax revenue, 9.8% of the state total (Table 35).

Local property taxes fund municipal expenses, road maintenance and local education. A statewide property tax is the foundation of education financing in the state. For the purposes of education funding, all real property is classified as either homestead or nonresidential. A statewide education tax is imposed on these two classes of property at different rates. The homestead education tax rate in each municipality depends upon the local per pupil spending. Both the homestead and nonresidential education tax rates are adjusted by the local common level of appraisal of the property. Tables 2 thru 15 show the latest homestead tax rates for towns in Vermont. An explanation of how the school tax rates are set is available at: <http://www.state.vt.us/tax/pvr.shtml>

HOUSING

Year-round home sales in Vermont increased 15.7% between 2011 and 2012. The number of year-round homes sold was 5,559, up from 4,804 in 2011 and 4,834 in 2010. Despite this improvement, the effects of the recent recession can still be felt. Home sales activity is well below its 2004 peak of 9,659 transactions and its 25-year average of 6,515.

The median price of year-round homes increased over this period. The statewide median sale price of a year-round home was \$196,000 in 2012, up from \$195,000 in 2011 but still below the 2007-2008 peak of \$200,000. This figure includes all types of single-family dwellings including mobile homes. The highest prices continue to be in Chittenden County, where the median sale price climbed two percent to \$250,000 between 2011

and 2012. Among counties with at least 100 transactions, Essex County experienced the greatest increase in median sale price, 12.2%. Addison saw the largest decline with median sale price falling 6.37%

The number of annual vacation home sales stood at 1,535 in 2012, an increase of 4.3% from 2011. This follows a steady decline in sales between 2004, when sales peaked at 3,241 and 2011. A small increase in 2009 is the exception to this trend. The median sale price for these properties declined from \$225,000 in 2011 to \$203,000 in 2012, a decline of 9.8%.

EDUCATION

Vermont school enrollment has been declining since 1997. In school year (SY) 2012, Vermont's high schools had a combined enrollment of 27,771 students - a drop of 4.8% from SY 2010. High school enrollment figures by county reflect the school age population data by county. The three year average dropout rate was lowest in Craftsbury (0%) and Stowe High School (0.5%). The three year average exceeded ten percent in Springfield (10.6%), Bellows Falls (10.7%), Winooski (11.6%), Concord (12.4%), and Williamstown (14.0%). Overall, the statewide dropout rate for high school students averaged 5.8% for the three-year period ending in SY 2012. This level represents an increase of three percentage points from the prior three-year period ending in SY 2011 (Table 37).

The average student-teacher ratio in Vermont decline by two tenths of a percent in 2012, from 10.9 students per teacher in 2011 to 10.7 in 2012. The lowest student-teacher ratios were found in Chelsea and Twin Valley at 7.6 and 7.7 students per teacher respectively. The highest ratios

were found at Mt. Mansfield (16.1), North Country (14.3) and Mt. Anthony (14.2) (Table 37).

As a state, 3% of the tested high school population was able to demonstrate *Proficient with Distinction* (level 4) for math and an additional 35% were *Proficient* (level 3). 38% were *Substantially Below Proficient* (level 1). In science, 2% were *Proficient with Distinction* while 30% were *Proficient*. In writing, 4% tested at *Proficient with Distinction* and another 43% at *Proficient* (Table 38).

The state fares much better in Reading, where 31% of Vermont High School students tested at *Proficient with Distinction* (level 4) and additional 43% tested as *Proficient* (level 3). Only 10% of students performed *Substantially Below Proficient* (level 1).

GROSS STATE PRODUCT

Gross State Product (GSP) is the broadest measure of economic activity in the state. After increasing every year since 1993, GSP - the value of all final goods and services produced in - fell for three consecutive years between 2007 and 2009. This decline was halted when the economy grew by 4.1% in 2010. While growth remained positive in 2011, the rate was reduced to 0.5%. Broadly speaking, both the contraction and the later expansion track national trends. Vermont's losses were smaller in percentage terms than the national figures but the state's recovery has been slower.

These figures translate to real per capita Gross State Product of \$36,665 (chained 2005 dollars) in 2011, up \$147 from the previous year. While it's a welcome increase, per capita income remains below its 2008 peak of \$36,798. (Table 53)

Average Monthly Earnings, New Hires	\$2,176	n/a	\$1,967	n/a	\$1,834	n/a

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = $(1/2) \times (\text{full-quarter hires} + \text{full-quarter separations}) / \text{employment stable jobs}$

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = $(1/2) \times (\text{full-quarter hires} + \text{full-quarter separations}) / \text{employment stable jobs}$

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = (1/2) x (full-quarter hires + full-quarter separations) / employment stable jobs

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

Essex County Work Destination Report - Where Residents Work

Map of Essex County, Vermont, showing job density by census tract. The map includes major roads like I-91, I-93, and US-5, and labels for towns such as Orleans, Caledonia, and St. Johnsbury. A legend in the bottom left corner defines job density ranges from 1-3 jobs to 116-177 jobs per square mile. A red diamond marker is located in the central-eastern part of the county.

Legend:

- 5 - 11 Jobs/Sq.Mile
- 12 - 32 Jobs/Sq.Mile
- 33 - 66 Jobs/Sq.Mile
- 67 - 115 Jobs/Sq.Mile
- 116 - 177 Jobs/Sq.Mile
- 1 - 3 Jobs
- 4 - 11 Jobs
- 12 - 25 Jobs
- 26 - 44 Jobs
- 45 - 69 Jobs

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = (1/2) x (full-quarter hires + full-quarter separations) / employment stable jobs

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

Average Monthly Earnings, New Hires	\$1,790	n/a	\$1,668	n/a	\$1,638	n/a

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = $(1/2) \times (\text{full-quarter hires} + \text{full-quarter separations}) / \text{employment stable jobs}$

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = (1/2) x (full-quarter hires + full-quarter separations) / employment stable jobs

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

* Notes and definitions

Information is average quarterly data for the calendar year.

Total Employment: Total number of workers (jobs) who were employed by the same employer in both the current and previous quarter.

Net Job Change: The difference between current and previous employment at each business.

Job Creation: The number of new jobs created by new area businesses or the expansion of employment by existing firms.

Stable Job or Full-quarter employee: A job held by the same employee for the previous, current and subsequent quarters.

Separations: Total number of workers who were employed by a business in the current quarter, but not in the subsequent quarter.

New Hires: Total number of workers who were hired by a given employer and had not been employed by that employer during the past year.

Turnover: Turnover Rate = $(1/2) \times (\text{full-quarter hires} + \text{full-quarter separations}) / \text{employment stable jobs}$

Avg Monthly Earnings: Total quarterly earnings of all full-quarter employees divided by the number of full-quarter employees, divided by 3.

Avg New Hire Earnings: Total quarterly earnings of all full-quarter new hires divided by the number of full-quarter new hires, divided by 3.

GLOSSARY

ADJUSTED GROSS INCOME (AGI) is the value an individual reports on their state income tax. The Vermont Department of Taxes provides the data reported in this publication.

* As noted by the Tax Department: This data is provided for historical continuity with previous tax reports. Median AGI for all tax returns is an inappropriate measure of central tendency because it is so dependent on the mix of single and dual incomes within a town.

Determination of median AGI for all tax returns by town was required by VSA Title 16, Section 3480 in 1981 to assist in computation of aid to education. In 1987 this statute section was amended to specify determination of average AGI per exemption. The entire section was repealed in 1997 as part of Act 60.

AGE COHORT is an age grouping that is an aggregate of sequential years of age. For example, one group might be all persons between the ages 5-14.

ANNUAL AVERAGE WAGE is the average wage paid by all firms covered under the Vermont Unemployment Compensation Law or for federal agencies, the Federal Unemployment Compensation Law. The average wage is computed by dividing the total wages paid during the year by the average employment.

COVERED EMPLOYMENT in this publication includes the employment of both public and private employers covered by the Vermont or Federal Unemployment Compensation Law. The data is gathered from reports submitted by employers each quarter and is aggregated into industries as defined by the North American Industry Classification System (NAICS). The major groups of employers excluded from coverage are most agricultural production firms and the self-employed.

EDUCATION

ASSESSMENTS are the New England Common Assessment Program (NECAP) exams, given to Vermont public school students in grades three through eight and eleven. The NECAP exams were designed specifically to assess how well Vermont students have learned the skills and content contained in *Vermont's Framework of Standards and Learning Opportunities*. This is the fourth year of results on the NECAP exams for grades three through eight and the second year for grade eleven.

COHORT GRADUATION RATE is calculated by tracking the students from the time they enter grade nine. Students who graduate within four years are considered on-time graduates. The number of on-time graduates is divided by the total number of students in the cohort. Students who transfer into a school are included in the cohort, while students who transfer out or die are dropped from the cohort. For the 2012 graduation rate, all students that entered grade nine in 2008 are included in the cohort.

$$\text{Cohort Graduation Rate} = \frac{\text{On-time Graduates By Year X}}{(\text{First-time Entering Ninth Graders in Year X-4}) + (\text{Transfers In}) - (\text{Transfers Out})}$$

GLOSSARY continued

EDUCATION (continued)

DROP OUT RATE is a three year average of the percentage of students who leave high school during the school year and the preceding summer. Enrollment figures used in calculating this rate have been adjusted for transfers and deaths.

ENROLLMENT is an annual head count as of October 1st. The enrollment report is organized by school, grade, ethnicity and gender break down.

EFFECTIVE HOMESTEAD TAX RATE: The tax rate levied on homestead property is adjusted upward if the residents of that school district spend more than the “base education spending” amount. The base is \$8,723 per pupil for tax year 2012 (FY13). Here’s an illustration of how the rate is adjusted.

Say your local school budget provides for spending of \$13,525 per pupil. The homestead tax rate of \$0.89 will be adjusted. It will be adjusted higher in proportion to the amount your voters decided to spend over \$8,723 per pupil. In this example, the district spending adjustment is:

(Locally Approved per Pupil Spending) \$13,525 / (Base Education Spending) \$8,723 = (District Spending Adjustment) 1.55050 or 155.050%

EMPLOYMENT in this publication is measured by Covered Employment and Labor Force. Covered Employment is based upon where the job is located. Labor Force is based upon where the worker resides. See Covered Employment and Labor Force for further information.

HOME SALES are the number of homes sold in Vermont by county. This includes all single family homes, condos and mobile homes sold with and without land. The home value reflects the median price of homes sold in that county.

LABOR FORCE data measures the labor force status of the area's civilian residents who are 16 years of age or older. The residents may work, look for work, or be unemployed from firms in areas other than where they reside. The estimates include agricultural workers, unpaid family members and the self-employed.

MEDIAN is a statistical term. Data is put in numeral order. The median is the middle term. Fifty percent of the data fall above the median and fifty percent fall below the median.

PER CAPITA INCOME data for the state and counties is based on estimates from the Bureau of Economic Analysis of the U.S. Department of Commerce.
