

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Optional Requirements for Interim Credentials for Building Trades Plumber

Level 1 **1,700 – 2000 Hours OJL and 1st Year RI**

- **Completion of Brazing Certification UA-51** – The completed braze test assembly shall be visually examined for cleanliness and the presence of brazing filler metal all around the joint at the interface between the socket and the pipe. Outside surfaces shall be free of excessive braze metal and oxidation. Sectioning tests shall be in accordance with ASME Code Section IX.
- **Soldering Certification** – The Copper Development Association Inc. (CDA) regularly receives inquiries regarding the methods and procedures required to qualify installers for the installation of soldered-joint copper piping systems. Currently, there are no known qualifications requirements developed and certified by any consensus code-writing body. Therefore, to provide a qualified procedure for the testing and certification of solderers, the CDA has developed the following Soldering Procedure Specification. The attached documents satisfy the requirements and processes that contributed to the development of ASTM B 828, *Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings*.
- **OSHA 10- and 30-Hour Course** – Smart Mark is an OSHA approved safety and health training program. It is a standardized and intensive program that was developed in 1998 by the Construction Industry Partnership (CIP) that prepares construction industry workers to identify hazards and prevent on-the-job accidents.
- **First Aid/CPR** – The student will learn basic life support, which includes Cardiopulmonary Resuscitation, Automated External Defibrillation and related subjects such as initial care for Angina, Stroke and Foreign Body Airway Obstruction. The basic first aid portion includes procedures for emergency moving of the injured, wounds/bleeding, traumatic shock, fractures, burns with special emphasis on accidental electrical contact, eye injuries, allergic reactions, seizures, drug overdoses, temperature-related problems and many other job related emergencies.

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Level 2 3,400 – 4,000 Hours OJL and 2nd Year RI

- Confined Space – This training is a combination of OSHA’s 2260 3-day classroom-based confined space course on OSHA’s General Industry Standard with CPWR’s 2-day hands-on simulated entry training. The OSHA 2260 course is designed to direct students to first determine if a space is a confined space, then to properly classify each confined space as either permit-required or a non-permit space. The course also allows students to determine which options are effective at protecting workers entering permit spaces. Topics include legal issues; permit programs, ventilation and rescue. CPWR’s hands-on training includes air-monitoring, ventilation, supplied-air respiral (SARs), self-contained breathing apparatus (SCBAs) entry procedures, retrieval and other aspects of permit-required confined space entry.
- Forklift Certification – Upon successful completion of this course, the member will be able to differentiate the different types of forklifts and powered industrial equipment; understand material handling techniques; understand operating techniques; determine hazards associated with powered industrial equipment; and implement and maintain a forklift/powered industrial equipment safety program. The student will take a comprehensive online exam at the end of the course. A score of 80% is required to receive certification.

Level 3 5,100 – 6,000 Hours OJL and 3rd

- Green Systems Awareness Certification – The certification consists of four parts. In order to receive this certification a member must achieve an 80% on each four parts, which include Core; HVAC; Plumbing; and Electrical. No certification is given if they fail one or more sections.
- UA Green Plumber Certification – The UA Green Plumber North American certification will require the Green Systems Awareness certification as a pre requisite. This advanced certification will concentrate on the installation of solar thermal heating systems and water Audits of residential and commercial buildings. The manual will be written by the UA also using material from Green Plumbers USA. The certification test will be a one hundred question test and will be certified by NITC. The training curriculum is in the final stages of

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

development and printing. We expect this credential to be final in early 2011. The exam is administered based on the skills developed around the work processes.

- Crane Signaller Certification – Signaller Training Program is a state of the art interactive training aid. The program covers all the pertinent requirements of the current OSHA 1926.550, ASME B30.5, B30.3, B30.23, and the current OSHA Cranes and Derrick standard 1926.1400. The course will cover theoretical and practical components of signaling and crane characteristics and limitations. Certification will be provided by the National Commission for the Certification of Crane Operators (NCCCO)

The apprentice must complete each level of the aforementioned requirements and certifications to be eligible to receive an Interim Credential Certification from the United States Department of Labor's, Office of Apprenticeship. The Interim Credential will read the following for each level:

- Level 1 – Braze Certification UA-51
Soldering Certification
OSHA 10- and 30-Hour Course
First Aid/CPR
- Level 2 – Confined Space
Forklift Certifications
- Level 3 - UA Green Plumber Certification
Green System Awareness Certification
Crane Signal Person Certification

The Certificate of Completion of Apprenticeship will be issued when the last year of apprenticeship is completed with all remaining requirements.

UA-51 BRAZE TEST SPECIFICATION

Manual Torch Brazing Process

Maximum Time Permitted for Test is Two Hours

COUPON MATERIALS

- Tube Material: SB-75 Seamless Tube (0.060" wall)
- Fitting Material: B16.22 Stop Coupling (0.055" wall)
- Fitting/Tube Size: 1 ½" Type L (1.625" OD Tube)
- Number of Coupons: Two Socket Couplings, Four Joints Total

JOINT CONFIGURATION

- Socket Joints Required
- Socket Clearance: 0.002" to 0.010"
- Overlap of Socket and Pipe: 1.09"

FLOW POSITION

- Two Joint in Each the Horizontal and Vertical Up-Flow Positions
- Face Fed Filler Metal

BRAZING FILLER MATERIALS

- Filler Metal: BCuP-2 Through BCuP-7
- Product Form: Round, Square, or Rectangular Rod

BRAZING FLUX

- None Permitted

FUEL GAS

Oxyacetylene, Natural, Propane, or MAPP[®] Gas

INTERNAL PURGING

- Oil Free Dry Nitrogen \geq 5 CFH (The purge gas shall flow until the brazement is cool to the touch so that no oxidation forms on the I.D. of the tube and fitting.)

GENERAL BRAZING TECHNIQUES

- Prebrazing Cleaning: Surface particles and dirt shall be removed using a clean lint-free cloth. Surface oxidation shall be removed with the use of a nylon abrasive cloth.

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

- Postbrazing Cleaning: Use a wet cloth or stainless steel wire brush to remove loose surface oxidation.
- Nature of Flame: Neutral
- Brazing Tip Sizes: (Optional) 54 Through 30: Use of Turbo Torch or Rosebud Permitted.

INSPECTION AND TESTING

- The completed braze test assembly shall be visually examined for cleanliness and the presence of brazing filler metal all around the joint at the interface between the socket and the pipe. Outside surfaces shall be free of excessive braze metal and oxidation.
- Assembly shall be examined by Sectioning Tests in accordance with ASME Code Section IX.

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

SUMMARY SOLDERING CERTIFICATION

The Copper Development Association Inc. (CDA) regularly receives inquiries regarding the methods and procedures required to qualify installers for the installation of soldered-joint copper piping systems. Currently, there are no known qualifications requirements developed and certified by any consensus code-writing body. Therefore, to provide a qualified procedure for the testing and certification of solderers, the CDA has developed the following Soldering Procedure Specification. The attached documents satisfy the requirements and processes that contributed to the development of ASTM B 828, *Standard Practice for Making Capillary Joints by Soldering of Copper and Copper Alloy Tube and Fittings*.

These documents were developed by the CDA and tested by PRL Metallurgical Laboratory, a division of Regal Cast, Inc.,¹ an ASME-recognized test laboratory.

It is the responsibility of the contractor using this specification and the supporting qualification records to ensure that the appropriate tests are conducted to qualify each solderer. It is also the contractor's responsibility to assure that these specifications meet any additional requirements of the referencing document. **The contractor shall maintain a signed and dated record of the Soldering Procedure Specifications, Procedure Qualification Records, and the resulting Solderer Performance Qualifications and shall assume responsibility or liability of any kind in connection with the use of these documents. CDA makes no representation or warranties of any kind in the use of these documents.**

The documents are:

- Soldering Procedure Specification (SPS) – the document that specifies the required soldering variables for a specific application
- Procedure Qualification Record (PQR) – a record of soldering variables and conditions used to produce an acceptable test solder joint and the result of tests conducted to qualify a soldering procedure specification
- Solderer Performance Qualification Record (SPQR or SQR) – a record of the soldering conditions used to produce an acceptable test solder joint, and the results of the tests performed on the solder joint to qualify the solderer

¹PRL Metallurgical Laboratory, P.O. Box 1170, 307 N. Ninth Avenue, Lebanon, PA 17046

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

SPS No. CDA-S001

TITLE

Soldering Procedure Specification CDA-2001 for Soldering Copper and Copper Alloy Tube and Fittings Using a Manual Air-fuel Torch and ASTM B 828 Procedures

SCOPE

This procedure is applicable for the soldering of copper tube and copper alloy fittings in the range of 0.375" nominal to 8.0" nominal. Wall thickness range shall be from 0.023" to 0.298". The tube and fitting for the test solder joint shall be fabricated in the horizontal position.

BASE METAL

Base metals shall be UNS C12200 copper conforming to the requirements of Group BM No. 300 as listed in Table B1 of ANSI/AWS B2.2-91.

FILLER METAL

Filler metals shall meet the requirements of Table 5 of the latest revision of ASTM B 32, *Standard Specification for Solder Metals*. Filler metals shall contain less than 0.2% lead (Pb). Filler metals shall be stored in accordance with manufacturer's recommendations and shall be 0.125" wire.

SOLDERING FLUX

Soldering fluxes shall be in accordance with the requirements of ASTM B 813, *Standard Specification for Liquid and Paste Fluxes for Soldering Applications of Copper and Copper Alloy Tube and Fittings*.

PURGE

No purge gas required.

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

JOINT DESIGN AND TOLERANCES

Joint type shall be socket/lap. The minimum and maximum joint clearance/capillary space shall be 0.002" to 0.010". Lap (overlap) shall meet the dimensional requirements of the latest revisions of ASME/ANSI B16.22 *Wrought Copper and Copper Alloy Solder Joint Pressure Fittings* or MSS SP-104 *Manufacturers Standardization Society, Wrought Copper Solder Joint Pressure Fittings*.

NOTE #1 BASE METAL (Preparation)

CUTTING

Cut tube ends square. Cutting process shall be performed in a manner that prevents tube ends from being deformed. If a tube cutter is used, it shall be free of oil, dirt, lint, and other debris. The cutter wheel(s) shall be sharp and the rollers free-rolling.

REAMING

Ream all tube ends to the original inside diameter (I.D.) of the tube to remove the small burr created by the cutting operation. Care shall be exercised to insure that no shavings are left in the tube.

CLEANING

Surface oxidation on the I.D. of the fitting shall be removed with an appropriately sized fitting brush or abrasive cloth. Surface oxidation on the outside diameter (O.D.) of the tube ends shall be removed with a wire brush or abrasive cloth for a distance slightly more than the depth of the fitting cup (see **Figure 1**, "Lap"). Steel wool shall not be used.

FLUXING

Apply a thin even coating of flux with a brush to both tube and fitting as soon as possible after cleaning.

ASSEMBLY AND SUPPORT

Insert tube ends into the fitting cup, making sure that the tube end is seated against the base of the fitting cup. Support the tube and fitting assembly to insure an adequate capillary space

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

around the entire circumference of the joint.

NOTE #2 SOLDERING PROCESS (Post-Solder Procedures)

POST-SOLDER CLEANING

When the joint is cool to the touch, the outside shall be cleaned using a damp cloth to remove any remaining soldering flux and allow a clear visual inspection of the joint.

VISUAL EXAMINATION

The finished joint shall be visually examined. The following conditions shall be considered unacceptable according to this specification:

- Drips of excess solder on the outside of the tube and/or fitting
- Cracks in the tube or fitting
- Cracks in the solder filler metal

PEEL TEST

The finished joint shall be sectioned lengthwise and flattened to separate the tube from the fitting. Following sectioning of the finished solder joint, the joint shall be visually examined. The following conditions shall be considered unacceptable according to this specification (see **Appendix A**):

- A total area of defects (unsoldered area, flux inclusions, or incomplete bridging of solder metal between the tube and fitting (see **Appendix A**, Bridging)) of greater than 30% of the total faying area (the front edge to the rear edge of the overlap) of any of the individual joints.
- A sum of the lengths of the defects measured on any one line in the direction of the lap shall not exceed 30% of the length of the lap.
- Solder voids that extend from the inside edge of the fitting to the outside edge creating a leak path through the capillary space, regardless of the area of the void.

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

APPENDIX A

ACCEPTANCE CRITERIA FOR VISUAL EXAMINATION AND PEEL TESTING OF SOLDER JOINTS

Solder Coverage:

Strength and pressure ratings of solder joints for copper tube and fittings are found in Annex A of ASME B16.22, *Wrought Copper and Copper Alloy Solder Joint Pressure Fittings*. It is generally accepted that a minimum of 70% fill of solder material into the capillary space of the joint is required to insure acceptable strength and pressure capabilities.¹⁻² For purposes of qualifying individuals in soldering competency, this specification requires a minimum of 70% fill in any joint (see **Number of Joints**).

Note: *Grading of these joints can be accomplished by overlaying the soldered surface of the tube or fitting with a clear plastic sheet with a grid printed on it. By counting the squares in the grid covering areas not covered by solder (see **Bridging**) and comparing them to the total number of squares covering the faying surface, a percentage of coverage can be calculated.*

Bridging:

Bridging is the spanning of the solder from the outside surface of the tube to the inside surface of the fitting, indicating complete fill of the capillary space. If bridging does not occur, the surfaces of the tube and fitting may just be “tinned,” not adding anything of significance to strength and pressure capabilities. When joints are cold-peeled, areas that have been properly bridged will be a dull gray color on one or both corresponding surfaces indicating a physical separation of the solder material. There may be specks of copper indicating that the solder metal actually separated from the copper surface. Areas where this bridging has not taken place will show shiny silver surfaces on the corresponding faying surfaces, associated with an area where the solder depth is lower, indicating there was no physical separation of the solder metal when the joint was peeled.

The areas that have not been properly bridged shall be counted as part of the total void areas for purposes of calculating total solder coverage.

¹ American Society of Metals, Metals Handbook, Ninth Edition, Volume 6, (Menlo Park, OH: American Society of Metals, 1983) 1095.

² American Welding Society, Soldering Manual, 2nd ed, revised, (Miami: American Welding Society, 1978) 23.

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Location of Defects:

The location of defects in a soldered joint and their relation to each other can greatly affect the strength of the joint. Defects in a line from the front edge to the rear edge of the overlap (faying surfaces) will result in a leaking joint and will also reduce the strength of the joint. Therefore, for purposes of qualifying individuals, this specification also requires:

- The sum of the lengths of all defects, measured in a straight line in the direction of the lap (from front of cup to back of cup), are not to exceed 30% of the length of the lap.
- No solder void, or incomplete bridging, may extend continuously along the entire length of the capillary space from the inside of the fitting to the outside creating a leak path through the capillary space.

These requirements must be met for all joints in the test series.

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

APPENDIX A

TEST JOINTS

Range of Diameters:

There can be significant differences in the equipment and technique used to solder larger diameters and smaller diameters. Consequently, test solder joints will qualify a solderer as follows:

- 1" nominal test joints will qualify a solderer for diameters up to 1 ½" nominal.
- 2" nominal test joints will qualify a solderer for diameters from 2" through 3" nominal.
- 4" nominal test joints will qualify a solderer for diameters from 2" through 5" nominal.
- 6" nominal test joints will qualify a solderer for diameters from 2" through 6" nominal.
- 8" nominal test joints will qualify a solderer for diameters from 2" through 8" nominal.

Number of Test Joints:

Four test joints will be required for each diameter range to be qualified. Test joints of all assemblies are to be soldered in the horizontal position.

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

DESIGNATED TRAINING TOPICS

10-HOUR CONSTRUCTION INDUSTRY OUTREACH TRAINING PROGRAM

10-HOUR MANDATORY COURSE TOPICS

The 10-hour Construction Industry Outreach Training Program is intended to provide an entry-level construction workers general awareness on recognizing and preventing hazards on a construction site. The training covers a variety of construction safety and health hazards which a worker may encounter at a construction site. OSHA recommends this training as an orientation to occupational safety and health. Workers must receive additional training on hazards specific to their job. Training should emphasize hazard identification, avoidance, control and prevention, not OSHA standards. Instructional time must be a minimum of 10 hours.

Breakdown of topics as follows:

- **Mandatory – 4 hours:** Four topics to be taught, ranging from one-half to two hours each (Introduction to OSHA; OSHA Focus Four Hazards; Personal Protective and Lifesaving Equipment; Health Hazards in Construction)
- **Elective – 2 hours:** Choose at least two of these topics for a minimum of one-half hour each. Must cover at least two hours.
- **Optional – 4 hours:** Learn any other construction industry hazards or policies and/or expand on the mandatory or elective topics, minimum of one-half hour each

10-HOUR CONSTRUCTION INDUSTRY REQUIREMENT COURSE TOPICS

Introduction to OSHA – One Hour

- OSH Act, General Duty Clause, Employer and Employee Rights and Responsibilities, Whistleblower Rights, Recordkeeping basics
- Inspections, Citations, and Penalties
- General Safety and Health Provisions, Competent Person, Subpart C
- Value of Safety and Health
- OSHA Website, OSHA 800 number and available resources

OSHA Focus Four Hazards – Two Hours (must cover all four areas—minimum 15 minutes on each)

- Fall Protection, Subpart M (e.g., floors, platform, roofs)
- Electrical, Subpart K (e.g., overhead power lines, power tools and cords, temporary wiring, grounding)

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

- Struck by (e.g., falling objects, trucks, cranes)
- Caught in/Between (e.g., trench hazards, equipment)

Personal Protection and Lifesaving Equipment – 30 Minutes, Subpart E

Health Hazards in Construction – 30 Minutes (e.g., noise, hazards communication and crystalline silica)

ELECTIVES

Choose at least two of the following topics – Must add up to at least two hours – minimum one-half hour each:

- Materials Handling, Storage, Use and Disposal, Subpart H
- Tools – Hand and Power, Subpart I
- Scaffolds, Subpart L
- Cranes, Derricks, Hoists, Elevators, and Conveyors, Subpart N
- Excavations, Subpart P
- Stairways and Ladders, Subpart X

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

DESIGNATED TRAINING TOPICS

30-HOUR CONSTRUCTION INDUSTRY OUTREACH TRAINING PROGRAM

30-HOUR MANDATORY COURSE TOPICS

The 30-Hour Construction Outreach Training Program is intended to provide a variety of training to workers with some safety responsibility. Workers must receive additional training on hazards specific to their job. Training should emphasize hazard identification, avoidance, control and prevention, not OSHA standards. Instructional time must be a minimum of 30 hours. OSHA subpart references are provided for informational purposes; training should emphasize hazard awareness.

Breakdown of topics is as follows:

- **Mandatory – 12 hours:** Five topics to be taught, ranging from one to five hours each
- **Elective – 12 hours:** Choose at least six of these topics for a minimum of one-half hour each
- **Optional – 6 hours:** Learn any other construction industry hazards or policies and/or expand on the mandatory or elective topics, minimum of one-half hour each

30-Hour Construction Industry Course Topics

Introduction to OSHA – at least Two Hours

- OSH Act, General Duty Clause, Employer and Employee Rights and Responsibilities, Whistleblower Rights, Recordkeeping Basics
- Inspections, Citations, and Penalties
- General Safety and Health Provisions, Competent Person, Subpart C
- Value of Safety and Health
- OSHA Website, OSHA 800 Number and Available resources

OSHA Focus Four Hazards – at least Five Hours (must cover all four areas – minimum 30 minutes on each)

- Fall Protection, Subpart M (e.g., floors, platform, roofs)
- Electrical, Subpart K (e.g., overhead power lines, power tools and cords, temporary wiring, grounding)
- Struck by (e.g., falling objects, trucks, constructing masonry walls)
- Caught in/between (e.g., trench hazards, unguarded machinery, equipment)

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Personal Protection and Lifesaving Equipment – at least Two Hours

Health Hazards in Construction – at least Two Hours

Stairways and Ladders, Subpart X – at least One Hour

ELECTIVES

30-Hour Elective Course Topics

Choose at least six of the following topics – Must add up to at least 12 hours:

- Fire Protection and Prevention, Subpart F
- Materials Handling, Storage, Use and Disposal, Subpart H
- Tools – Hand and Power, Subpart I
- Welding and Cutting, Subpart J
- Scaffolds, Subpart L
- Cranes, Derricks, Hoists, Elevators, and Conveyors, Subpart N
- Motor Vehicles, Mechanized Equipment and Marine Operations; Rollover Protective Structures and Overhead Protection; and Signs, Signals and Barricades, Subpart O, W, and G
- Excavations, Subpart P
- Concrete and Masonry Construction, Subpart Q
- Steel Erection, Subpart R
- Confined Space Entry
- Powered Industrial Vehicles
- Ergonomics

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

First Aid Course Syllabus

Course Intros

- Course, Instructor, and Student Introductions
- Facility Orientation
- General Course Information, Course Completion Requirements
- Emergency Action Plan (EAP)

First Aid

- Initial Assessment vs. Secondary Assessment
- Emergency Moves: Clothes Drag, Seat Carry
- Physical Exam and SAMPLE History
- Documentation and Legal Considerations
- Sudden Illness
- Wounds
- Water Sterilization Steps
- Bleeding
- Caring for Shock
- Burns
- Injuries to Muscles, Bones, and Joints
- Splints
- Bites and Stings
- Administering Epinephrine
- Assisting with Bronchodilators (inhalers)
- Heat Related Emergencies
- Cold Related Emergencies
- In-line Stabilization for Head, Neck and Back Injuries
- Backboard Techniques
- Common Types of Injuries in Your Area
- First Aid Kits

Course Review

- First Aid

Course Written Exams

- First Aid

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Adult CPR Course

Course Duration

Approximately 45-60 minutes

Note: It is strongly recommended that you read the entire course before taking the exam. However, we understand that many of our clients are trained professionals who simply need a quick refresher. If you are familiar with the material you can proceed directly to the exam immediately after registration in which case you may be certified within a few minutes.

Lesson 1: Introduction

Brief history of CPR

Mechanics of Artificial Life Support

Fundamentals of Human Physiology (Circulatory System) and CPR applications

What is expected during an emergency (including EMS response).

Lesson 2: Adult CPR

Definitions

Scene assessment and appropriate response

A-B-Cs of Adult CPR for 1 rescuer

A-B-Cs of Adult CPR for 2 rescuers

Exam

Eight multiple choice and true-or-false questions

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Confined Space Rescue Technician

Orientation Module

Introduction to Confined Space Rescue

Course Introduction - Preface
Confined Space Identification - Chapter 1
OSHA Regulation - Chapter 2
Confined Space Hazards - Chapter 4
Atmospheric Monitoring - Chapter 5
Hazard Control - Chapter 6
Personal Protective Equipment - Chapter 7
Phases of Confined Space Rescue - Chapter 8
Rescue Rope and Related Equipment - Chapter 9
High Point Anchor Systems - Chapter 10
Communications - Chapter 11
Permitting Confined Spaces - Chapter 12

Skills Module

Knots

Chapter 9
How to Tie a Figure Eight Stopper
How to Tie a Figure Eight on a Bight
How to Tie a Figure Eight Follow Through
How to Tie a Figure Eight Bend
How to Tie a Square Knot
How to Tie an Overhand Bend
How to Tie a Double Overhand Bend (Double Fisherman Knot)
How to Attach a 3-Wrap Prusik to a Rescue Rope
How to Construct a Modified Trucker's Hitch

Skills Module

Anchor Systems

Chapter 9
How to Tie a Single Loop Anchor Sling
How to Tie a Basket Sling
How to Tie a Multi-Loop Anchor Sling (Wrap Three, Pull Two)
How to Tie a Tensionless Hitch

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

How to Construct a Back-Tied Anchor System

Skills Module

RPM

Chapter 9

How to Attach and Operate a Brake Bar Rack as Part of the RPM

How to Construct and Operate a Load Release Hitch as Part of the RPM

How to Attach a Prusik Loop to the RPM for Use in a Haul System

How to Construct and Operate the RPM

Skills Module

Belay Systems

Chapter 9

How to Construct and Operate a Tandem Prusik Belay System

How to Convert a Tandem Prusik Belay System to a Retrieval Line

Skills Module

Raising Systems

Chapter 9

How to Construct and Operate a 2:1 Ladder Rig Mechanical Advantage System

How to Construct and Operate a 3:1 Z-Rig Mechanical Advantage System Through a High Point Anchor

How to Construct and Operate a 3:1 Piggyback Mechanical Advantage System Through a High Point Anchor

How to Construct and Operate a 4:1 Mechanical Advantage System

How to Construct and Operate a 4:1 Pre-Rig Mechanical Advantage System

Skills Module

Rescuer and Victim Packaging

Chapter 9

How to Tie Two Half Hitches

How to Tie a Round Turn and Two Half Hitches

How to Tie and Attach a Hasty Chest Harness (Double Locking Lark's Foot) to a Victim

How to Tie and Attach Wristlets and Anklets

How to Secure a Victim to a Rescue Litter

How to Rig a Litter for Vertical Rescue

How to Rig a Victim in a SKED Litter

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

How to Rig a Victim in an LSP Half Back or Equivalent
How to Don a Pre-Sewn Class III Rescue Harness

Skills Module

Respiratory Equipment

Chapter 7

How to Don and Operate a Self-Contained Breathing Apparatus (SCBA)
How to Don and Operate a Supplied Air Respirator (SAR) and Escape Pack
How to Operate a Supplied Air Respiratory System
How to Lay-Out and Deploy Supplied Air Lines
How to Provide Victim Respiratory Protection

Skills Module

Communication Systems

Chapter 11

How to Perform a Verbal Communication System
How to Perform a Hand Signal Communication System
How to Operate a Rope Signal Communication System
How to Operate a Light Signal Communication System
How to Operate a Tapping and Rapping Communication System
How to Operate a Portable Radio Communication System
How to Operate a Hardwire Communication System

Skills Module

Hazard Control

Chapter 6

How to Lock-Out/Tag-Out an Electrical Equipment Switch
How to Lock-Out/Tag-Out an Electrical Circuit Switch
How to Lock-Out/Tag-Out a Gate Valve
How to Operate a Ventilation Ducting
How to Deploy Ventilation Ducting
How to Deploy a Manhole Saddle Vent
How to Perform Positive Pressure (Supply) Ventilation
How to Perform Negative Pressure (Exhaust) Ventilation
How to Perform Combination Ventilation
How to Perform Local Supply Ventilation
How to Calculate Ventilation Air Exchanges

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Skills Module

Atmospheric Monitoring

Chapter 5

- How to Perform Instrument Start-Up
- How to Determine the Instrument Target Gases
- How to Bump Test the Instrument
- How to Check the Peaks on the Instrument
- How to Clear the Peaks on the Instrument
- How to Perform Remote Sampling
- How to Use a Conversion Chart to Assess Flammability
- How to Perform Instrument Shut-Down

Skills Module

High Point Anchor Systems

Chapter 10

- How to Construct and Operate a Ladder Gin System
- How to Construct and Operate a Ladder “A” Frame System
- How to Set-Up and Operate a Tripod System
- How to Operate Cable and Winch Systems

Confined Space Entry Module

Confined Space Entry

- Confined Space Rescue – Vertical Entry
- Confined Space Rescue – Horizontal Entry
- Confined Space Rescue – Tapered Cross Section
- Confined Space Rescue – In-Pipe
- Confined Space Rescue – Non-Entry

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). Forklift Safety Course Outline

Powered Industrial Trucks

Definition

Scope of Standard

Forklift Accidents

Forklift Fatalities

Industries Where Powered Industrial Truck Accidents Occurred

Nonfatal Occupational Injuries and Illnesses by Source

Overview of Forklift Hazards

Four Major Areas of Concern:

--General Hazards That Apply to the Operation of All or Most Powered Industrial Trucks

--Hazards Associated with the Operation of Particular Types of Trucks;

--Hazards of Workplaces Generally

--Hazards of the Particular Workplace Where the Vehicle Operates.

Training Requirements

Performance-Oriented

Safe Operations

Training Program Implementation

Training Program Content

Refresher Training and Evaluation

Evaluation of Powered Industrial Truck Operator's

--After Initial Training

--After Refresher Training

--At Least Once Every Three Years

Employer Certification Shall Include:

--Name of Operator

--Date of Training

--Date of Evaluation

--Identity of Person(s) Performing the Training or Evaluation

Avoidance of Duplicative Training

Components of a Forklift

Certification

Classes of Commonly-Used Powered Industrial Trucks

Explanation of Types of Powered Industrial Trucks

Class I - Electric Motor Rider Trucks

Counterbalanced Rider Type, Stand Up

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

Three-Wheel Electric Trucks, Sit-Down
Counterbalanced Rider Type, Cushion Tires, Sit-Down (High And Low Platform)
Counterbalanced Rider, Pneumatic Tire, Sit-Down (High And Low Platform)
Class II - Electric Motor Narrow Aisle Trucks
High Lift Straddle
Order Picker
Reach Type Outrigger
Side Loaders, Turret Trucks, Swing Mast and Convertible Turret/Stock Pickers
Low Lift Pallet and Platform (Rider)
Class III - Electric Motor Hand or Hand/Rider Trucks
Low Lift Platform
Low Lift Walkie Pallet
Reach Type Outrigger
High Lift Straddle
High Lift Counterbalanced
Low Lift Walkie/Rider Pallet
Class IV - Internal Combustion Engine Trucks - Cushion (Solid) Tire
Class V - Internal Combustion Engine Trucks - Pneumatic Tires
Class VI - Electric & Internal Combustion Engine Tractor
Rough Terrain Straight Mast Forklifts
Rough Terrain Extended- Reach Forklifts
Stability of Powered Industrial Trucks
Definitions
General
Basic Principles
Stability Triangle
Longitudinal Stability
Lateral Stability
Dynamic Stability

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

UA Green Systems Awareness Certification

Section I Core

Energy Analysis and Awareness
Renewable energy & Sustainable Energy
Energy Management
Building Information Modeling (BIM)
Commercial Building Energy Consumption Survey (CBECS)
Energy Conservation Measures (ECM)
Energy Information Administration (EIA)
Energy Audit
Energy Consumption and Demand Analysis
Heat Load Calculation
Life Cycle Cost Analysis 1
Worksheet #1

Section II HVAC/R

Heating-Ventilation-Air Conditioning-Refrigeration
Energy Efficiency Ratings
Energy Efficiency Ratio
Seasonal Energy Efficiency Ratio
Annual Fuel Utilization Efficiency
Heating Season Performance Factor
Coefficient of Performance (COP)
Comfort Conditioning
Ventilation and Indoor Air Quality
Comfort Cooling Methods and Green Alternatives
Mechanical Air Conditioning
Evaporative Cooling
Passive Cooling Systems
Solar Cooling
Thermal Storage
Commercial Refrigeration
U.S. EPA GreenChill (Advanced Refrigeration Partnership)
Refrigerant Containment Practices
Energy Conservation Measures
New and Replacement Equipment

Summary

¹NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeyworkers receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

UA Green Plumber Certification – to be completed by early 2011.

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association (UA) apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

United Association Crane Signalperson Training Course

Student Task List

ASME Standard Hand Signals, Section B30.5 and B30.3 – Student will demonstrate ability to correctly signal:

- Hoist
- Lower
- Use Whip Line
- Use Main Hoist
- Raise Boom
- Lower Boom
- Move Slowly
- Lower the Boom and Raise the Load
- Raise the Boom and Lower the Load
- Swing
- Stop
- Emergency Stop
- Travel
- Dog Everything
- Travel – Track Machine on Both Tracks
- Travel – Track Machine on One Track
- Extend Boom
- Retract Boom
- Extend Boom (One-Hand Signal)
- Retract Boom (One-Hand Signal)
- Trolley Travel
- Tower Travel

Operations and Limitations – Student will demonstrate knowledge of:

- Drift
- Radius
- Boom Angle
- Two-Blocking
- Boom Deflection
- Dynamic Loading
- Dynamic Unloading
- Side Loading
- Rated Capacity
- Quadrants of Operation
- Wind

Signalperson Requirements – Students must demonstrate knowledge of:

- Crane Function Names
- Special Signals
- Audible Travel Signals
- Safe Work Practices
- Working Near Energized Power Lines: ASME
- Working Near Energized Power Lines: OSHA (Current)
- Working Near Energized Power Lines: OSHA (Proposed)
- Occupant Qualifications
- Occupant Responsibilities
- Communications

¹NITC - National Inspection Testing Corporation; EPA – Environmental Protection Agency; OSHA – Occupational Safety and Health Administration; EPRI – Electric Power Research Institute; ESCO Institute; ASSE – American Society of Safety Engineers; NCCCO – National Commission for the Certification of Crane Operators; ASME – American Society of Mechanical Engineers; IAPMO – International Association of Plumbing and Mechanical Officials

To ensure that all United Association apprentices and journeymen receive the appropriate skills and knowledge from any of the 330 UA authorized training centers (covering 284 registered apprenticeship programs and over 40,000 registered apprentices), the International Pipe Trades Joint Training Committee (IPTJTC) has committed tremendous resources to the development of curriculum, standards and certifications (including 3rd party groups¹). The IPTJTC works in partnership with government, education, and industry groups (private and non-profit) in the development and validation of this material to assist in preparing these individuals for a successful career in the piping industry.

OSHA 1926.550 Cranes and Derricks – Students will demonstrate knowledge of:

- OSHA 1926.550(a) General Requirements
- OSHA 1926.550(b) Crawler, Locomotive, and Truck Cranes
- OSHA 1926.550(c) Hammerhead Tower Cranes
- OSHA 1926.550(d) Overhead and Gantry Cranes
- OSHA 1926.550(e) Derricks
- OSHA 1926.550(f) Mobile Cranes and Barges
- OSHA 1926.550(g) Crane and Derrick Suspended Platforms

ASME B30.3, B30.5, and B30.23 – Students will demonstrate knowledge of:

- Excerpts from ASME B30.3 – 3.3 Signals
 - Signals; Operating Near Electric Power Lines
- Excerpts from ASME B30.5 – 3.5 Operating Practices
 - Operating Practices; Moving the Load
- Excerpts from ASME B30.5 – 3.3 Signals
 - Signals; General
- Excerpts from ASME B30.23
 - Management

Student will demonstrate knowledge of subject matter by proficiently answering review questions prior to successfully completing proctored written and practical testing by third party agency.

¹ NITC - National Inspection Testing Corporation; EPA - Environmental Protection Agency; OSHA - Occupational Safety and Health Administration; EPRI - Electric Power Research Institute; ESCO Institute; ASSE - American Society of Safety Engineers; NCCCO - National Commission for the Certification of Crane Operators; ASME - American Society of Mechanical Engineers; IAPMO - International Association of Plumbing and Mechanical Officials
