Annual Performance Report

Workforce Information

Program Year 2012

Guam

This report describes the work activities and accomplishments during the July 2012 to June 2013 program year as required by the Training and Employment Guidance Letter (TEGL) No. 27-11 Attachment III. This report outlines the successful completion of each of the five specified deliverables in the PY 2012 program.

A. Description of Program Deliverables

1. Populate the Workforce Information Database (WIDb) Database with state and local data.

Staff continued to populate and maintain the Workforce Information (WIDb) databases formerly known as America's Labor Market Information (ALMIS) databases. Both core and other WIDb database tables have been populated beyond the core requirements. All Core tables have been populated to the extent that the programs and data exist on Guam. Updated Occupational Licensing databases were submitted to the National Crosswalk Service Center for placement on the ACINet site. Now Guam's occupational licensing information databases including licensed occupations and licensing agencies as well as other occupational licensing information can be viewed online as part of the national licensing information system. In addition to licensing information, other occupational information for Guam including the highest paying jobs by occupation is included and accessible through this site.

Tables of key interest such as building permits, employment, unemployment, wages, hours worked, average hourly earnings, number of persons employed by occupation, etc. in time series format from the ALMIS database information and presented it in Excel spreadsheets available online on the Department of Labor's website in response to customer information in that format.

Guam Data on O*Net Website

The screenshot shows a Mozilla Firefox browser window displaying the O*Net website. The address bar shows the URL: http://www.acinet.org/acinet/licensedoccupations/lois_state.asp?nodeid=16&by=occ. The page title is "Search by Occupation/Agency - Licensed Occupations - America's Career InfoNet - Mozilla Firefox".

The website header includes the "careeronestop" logo with the tagline "PATHWAYS TO CAREER SUCCESS". Navigation links include "Print This Page", "Email This Page", "FAQs", "Rate This Page", "Topics A to Z", "Site Search", "State Job Banks", and "More Resources: America's Career InfoNet".

The main content area is titled "Licensed Occupations" and contains the following text: "Use the Licensed Occupations tool to find contact information about licenses for career in your state. States provide this data, therefore Career InfoNet cannot guarantee that this information is comprehensive or accurate. Contact the license agency to verify any information provided here. Start your search by selecting a tab option below. Follow the instructions on each page to get your results. If you need help select Licensed Occupations Help below."

The search tool has three tabs: "Search By Occupation", "Search By Agency", and "Search By Keyword". The "Search By Occupation" tab is active. Below the tabs, there is a dropdown menu labeled "Select one or more state, district, or territory:" with the following options: Connecticut, Delaware, Florida, Georgia, Guam (highlighted), Hawaii, and Idaho. A "Next" button is located at the bottom right of the dropdown menu.

Baccalaureate Degree or higher from an accredited college or university to sit for the exam. B. You must have a Total of 150 credit hours* to qualify for issuance of CPA certificate. C. 24 credit hours must be in upper division accounting courses, including the following courses: > 3 credit hours in Financial Accounting > 3 credit hours in Auditing > 3 credit hours in Taxation > 3 credit hours in Management or Cost Accounting D. 36 credit hours must be in Business, which should include the following courses: > 6 credit hours in Economics > 3 credit hours in Finance > 3 credit hours in Business Law * NOTE: "credit hours" means a conventional college "Semester" hour. "Quarter" credit hours may be converted to Semester hours by multiplying by two-thirds (2/3)(e.g. 36 quarter hours equals 24 semester hours). EXAMINATIONS: APPLICATION AND FEES: A. You must pay a non-refundable application fee to the Guam Board of Accountancy with your examination application (please make check for the \$25.00 Application Fee payable to Treasurer of Guam). B. Examination Section Fees are paid to NASBA. These fees are paid only after Guam sends an Authorization to Test (ATT) to NASBA and you are billed. These fees may be paid online with a credit card to NASBA. Currently, these fees are: > Auditing and Attestation \$134.50 > Business Environment and Concepts \$100.50 > Financial Accounting and Reporting \$126.00 > Regulation \$109.00 (NOTE: The Prometric portion of the examination fee will increase as of July 1, 2005) C. A Guam Computer Testing Center Surcharge of \$100.00 per test section must be paid directly to NASBA by all candidates other than Guam residents. You may pay this fee at <http://www.nasba.org/nasbaweb.nsf/exam>. D. You may apply for one or more section(s) of the examination at a time. Miscellaneous ALMIS Files

Now that Guam has populated WIDb databases, they are accessible online where there is a national system to display them as noted above. However, for most of the databases, there is no national system for access and display. As the reader can see from the slides of a few of our populated database tables, the format is not suitable for use directly.

States, therefore, have either developed or contracted private vendors to provide search, access and display capabilities to make the user hostile database format accessible. The Government of Guam, Agency for Human Resource Development (AHRD) recently contracted Geographic Solutions to provide software support for the Workforce System. This software uses the WIDb databases to provide Labor Market Information on Demand with a focus on providing it to jobseekers as well as employers information as desired and needed. When looking for or placing a a job order this format provides information from a variety of the databases such as licenses, wages, training and more in response to searches for specific occupations. This capability provides very focused and user friendly and customized information for a person looking for occupational information. We have made arrangements with the vendor to provide the WIDb databases in the latest format with the most recent available data updates to display when the system is deployed. The system is expected to be in operation to the public near the end of calendar year 2013. In addition to the deployment of the labor market information through this system, our office has initiated procurement for vendor software to provide more robust analytical capabilities in the use and display of labor market information on the Guam Department of Labor's Bureau of Labor Statistics webpages.

2. Produce and disseminate industry and occupational employment projections

The Guam Department of Labor has produced both short and long-term industry and occupational employment projections for the specified time frames using the Projections Managing Partnership software suite. The Guam staff who are responsible for the projections received training on both the long-term and short-term projection modules in Salt Lake City, Utah. One of the primary challenges of producing such information is the creation of an industry employment time-series database. As Guam does not an unemployment insurance program and consequently the associated U.S. Department of Labor, Bureau of Labor Statistics, Quarterly Census of Employment and Wages Program (QCEW). In lieu of this Guam operates an Annual Census of Establishments survey program which provides the employer database for U.S. Department of Labor, Bureau of Labor Statistics cooperative statistical programs. The annual survey continues to be completed and during this program year, time-series employment data was compiled by Standard Industrial (SIC) industry categories and is available for 4, 3, 2 and industry division levels. This provides the foundation for producing industry trends using historical patterns. Conversion to the NAICS format to produce NAICS based industry formats was required for this program. The work to convert the historical time-series employment data from the SIC coding format to the NAICS format was undertaken last year and has been completed. Historical industry data in the NAICS format is now available on the Department of Labor's website under the Statistics section. Our Annual Census of Establishment reports are now being tabulated and published in the native NAICS format going forward. As Guam is geographically compact with only one island, it is not a State, and is considered one labor market for most purposes, sub-state projections are not needed or produced.

There are substantial developments expected on Guam in the future associated with plans to relocate in original plans, approximately 8,000 Marines from Okinawa and equal number of dependents to Guam. These plans have been since downsized and delayed. This and other large scale defense construction plans as well as those of the local government and private industry has resulted in the need for specific plan and construction information which is now being collected systematically to support forecasts which involve substantial changes to employment beyond those shown in historical trend analysis.

Guam continues to successfully operate the U.S. Department of Labor's Occupational Employment program which provides the database of occupational information required to develop occupational forecasts. Guam has obtained and is populating the long-term industry software to produce the long-term projections. The short-term projections software requires monthly time-series data. Guam does not have monthly time-series data. Discussions and work with the software trainers and developers to work through alternative approaches to producing the short-term projections overcoming the monthly data format input requirements were successful and short term projections are made using the more detailed annual industry data in conjunction with the more aggregated and current quarterly data. It has been coordinated so that the short-term forecasts are consistent with the long-term and incorporates recent military buildup and other economic information.

3. Conduct and publish relevant economic analyses, special workforce information and/or economic studies of benefit to the governor and state and local Workforce Information Boards (WIBs).

An annual economic has been prepared and incorporated as a section into the Executive Budget each year. The FY 2014 Economic Outlook report fulfills this requirement. The FY 2014 report was initially published as a section in the Executive Branch budget for FY 2014 and it was republished as a special feature in the Pacific Daily News business paper. It was the source of much of the content and economic analysis used in the most recent plan produced by the Guam Workforce Information Board (WIB). It has been provided to the Employment & Training administration in the required PDF format. We have also published other special reports in the past. The impact of an increase in minimum wage and reports on safety and health statistics were published. One special study produced was a comprehensive report on federal expenditure trends was produced by the Department of Labor, Bureau of Labor Statistics using the Consolidated Federal Funds Reports (CFFR) of which publication have been since discontinued by the U.S. Department of Commerce. The Bureau of Labor statistics also produces time-series statistical tables on building permits and federal construction projects to produce leading information for future construction industry employment. The workforce information produced under this funding, has been incorporated and used in a number of special economic reports including the Draft and Final Economic Impact Statements regarding relocation of the Marines to Guam from Okinawa. It is also used in bond indenture documents for public bond financing as well as various new stories on labor and economic events.

4. Post products, information, and reports on the Internet.

All of the statistical reports produced by the Guam Department of Labor, Bureau of Labor Statistics are posted on the Department of Labor website at: www.guamdol.net Additionally, data produced in Federal/State cooperative statistical programs is posted on the respective federal agencies website so that data are available comprehensively as part of each national statistical program. Projections data are provided to the Projections Managing Partnership for electronic dissemination and will soon be available in an accessible format to jobseekers in the Geographic Solutions Workforce software.

This funding provides the primary financial support for printing and decimation of occupational information products with both printing and on-line access. The publications of reports noted the milestones items including quarterly publication of the Current Employment Report, Annual publication of the Annual Census of Establishments, Annual Publication of an Economic Outlook report and Annual publication of the Occupational Employment and Wage Statistics reports have been accomplished as planned.

We provide Guam data electronically on U.S. Department of Labor, U.S. Department of Commerce, America's CareerInfoNet and Department of Interior websites which provide data for states and territories including Guam as part of their respective statistical programs.

HOUSEHOLD AND PER CAPITA INCOME: 2010

Bureau of Labor Statistics - Household and Per Capita Income

The Guam Department of Labor's Bureau of Labor Statistics is pleased to release the **HOUSEHOLD AND PER CAPITA INCOME: 2010** report. (pdf format)

Guam's Per Capita Income and average (mean) income of persons with income decreased slightly from 2008 to 2010, but mean and median household income increased due to increases in household size and an increased average number of income earners per household.

Per Capita Income for 2010 is \$12,864, a decrease of \$225 or 1.7 percent from calendar year 2008. Median individual income decreased from 13,200 in 2008 to 12,786 in 2010. Per Capita Income statistics for the total non-institutional civilian population includes both those with and without income. The mean income of persons with income in 2010 was \$25,462, a decline of \$17 from 2008's \$25,479.

Guam's average household income for calendar year 2010 was \$49,263, an increase of \$3,477 or 7.1 percent from calendar year 2008's \$45,786. Median household income increased from \$37,741 in 2008 to \$39,052 in 2010. Average household size increased from 3.5 persons per household in 2008 to 3.8 in 2010.

The Foreign Labor Certification Data Center is developed and maintained by the State of Utah under contract with the US Department of Labor, Office of Foreign Labor Certification.

5. Consult on a continuing basis with workforce investment boards and other key workforce and economic development partners and stakeholders.

Guam has one Workforce Investment Board. Various members individually request and receive information and reports primarily by e-mail as requested. The board is periodically provided reports and statistical information separately or as part of other information to support various activities. The milestones have been accomplished as planned. The agency director and staff meets with the Workforce Investment Board regularly. The Chief Economist serves as a member of the Visitor's Bureau research committee as well as has participated in Guam Economic Development Authority (GEDA) meetings and discussions regarding the buildup and public finance. Public outreach includes dissemination of news releases on all publications as well as providing topical information as requested for various media stories involving economic and statistical issues of the day. Additionally, economic and statistical information has been presented in conferences as a guest speaker and panel member with the Chamber of Commerce this year and the Society of Human Resource Managers and the Micronesian Empowerment conference in previous years.

B. Description of the annual economic analyses or special reports produced.

Aggregate statistics such as gross domestic produce for the government's revenue forecasting are desired and input into that process has been made and GDP estimates for Guam have since been published by the U.S. Department of Commerce, Bureau of Economic Analysis. The publications of reports includes quarterly publication of the Current Employment Report, Annual publication of the Annual Census of Establishments, Annual Publication of an Economic Outlook report and Semi-Annual publication of the Occupational Employment and Wage Statistics reports have been accomplished as planned.

Domestic Products estimates for Guam by the Bureau of Economic Analysis with input from Government of Guam agencies. The Chief Economist was appointed by the Governor as a member of the 2010 Census of Population and Housing for Guam review committee. Last year, the Department of Labor, including the Chief Economist participated in press conferences with the Governor regarding the release of the latest employment and unemployment reports.

The Department of Labor, Bureau of Labor Statistics is currently working on the 2012 Economic Census as the lead local agency. It has participated in the form redesign process with Economic Census personnel in consultation with private employers and other government agencies.

A substantial focus of the Workforce Information work effort and funding commitment this year has been to modernize and revise the unemployment statistics program. These efforts include improved sampling methods, an increased emphasis on more efficient and regular data collection by phone instead of personal visits. This included the establishment of a small call center office with phone headsets to permit future direct data entry to the computer with immediate editing. In consultation with the professional staff at the US Bureau of Labor Statistics and the Census department we are working to adopt the U.S. data collection software and participate in their survey methods training. This is enabling the Department to increase the publication frequency of unemployment statistics with the objective being continuing quarterly surveys and publications. Guam is the only U.S. Territory which is not included in the U.S. LAUS program which operates it's own unemployment statistics program.

C. Customer Consultations.

The facility for customer feedback exists for Workforce Information on the Department of Labor's website on the statistics menu. A more robust customer feedback page is planned for the next version of the website. The Geographic Solutions software is to include counts on usage of various information resources incorporated into the workforce system. Feedback is solicited and received during and after public presentations. Customers frequently contact and meet with us regarding the information available and what is desired for their projects. One need identified is employment information with greater geographic detail and fringe benefit information. More consistently published unemployment statistics were needed along with the associated income statistics and we have resumed providing them on a quarterly basis for the last year.

D. Recommendations for Improvements or Changes to the Deliverables

In producing the deliverable requirements, special consideration needs to be given to the non-state areas. Funding is vitally needed. However, due to the fixed costs and complexity of implementing this array of programs a higher base level of funding is needed. Also to consider providing additional centralized assistance with providing ready to use software such as Workforce Informer or other state WIDb display software with central coordination and support for island areas rather than each area reinventing the system which is not possible or cost effective. Fifty separate systems are not integrated or assessable as one system.

Maintenance and improvement in the existing Estimates Delivery System (EDS) is an important priority. It is a great example of "leveraging resources" in several respects. One, central maintenance, development and support incurs the cost once and makes the software resource available to all fifty states plus territories. Two, the software further "leverages" the existing statistical data base to use it for other purposes and more reports without the cost very high cost of collecting additional information. It provides a capacity to respond to customized customer inquiries and needs including legislature's policy changes in evaluating the effects of changes in the minimum wage and the number and types of workers affected by such proposals.
