

U.S. Small Business Administration
Office of Advocacy

November 2001

Minorities in Business, 2001

A report on the ownership, formation, management, financing, growth and other social and economic characteristics of minorities in business, based upon data compiled from federal government sources by the Office of Economic Research of the U.S. Small Business Administration, Office of Advocacy.

Minorities in Business, 2001

**Office of Advocacy
U.S. Small Business Administration
409 Third Street, S.W.
Washington, DC 20416**

Foreword

Minorities owned fewer than 7 percent of all U.S. firms, excluding C corporations, in 1982, but this share soared to about 15 percent by 1997. Minorities owned more than 3 million businesses in 1997, of which 615,222 had paid employees, generated more than \$591 billion in revenues, created more than 4.5 million jobs, and provided about \$96 billion in payroll to their workers.

Since its creation by the Congress in 1976, the U.S. Small Business Administration's Office of Advocacy has served as an independent voice for small business within the federal government. Essential to that effort is an understanding of minority-owned businesses, which are often smaller than those of their nonminority counterparts, but have grown rapidly in numbers and size over the recent past.

The economic well-being of America's minority communities is inextricably linked to their involvement in business activities. Business ownership by members of minority groups in American society has increased rapidly in recent years, and their participation has grown in other economic activities, including self-employment, business decision making, and the management of business operations. *Minorities in Business, 2001* examines available data reflecting minority participation in many of these business activities.

Like *Women in Business, 2001*, published in October 2001, *Minorities in Business, 2001* studies the attributes of small business subgroups in an effort to stimulate discussion by academics and policymakers on such issues as the reasons for their rapid growth and the barriers to their success. As mandated in its authorizing legislation, the Office of Advocacy continues its efforts to protect, strengthen, and effectively represent the interests of small, women-owned, and minority-owned businesses by conducting research, serving as an advocate in the regulatory process, and publishing the data necessary to increase public understanding of small business contributions and concerns. Your comments and suggestions are welcome.

More information is available on the Office of Advocacy website at www.sba.gov/advo. For specific questions on minorities in business, contact Dr. Ying Lowrey at ying.lowrey@sba.gov, write the Office of Advocacy, U.S. Small Business Administration, 409 Third Street, S.W., Washington, D.C. 20416, or call (202) 205-6533.

We appreciate your interest in and support for small business.

Susan Walthall
Acting Chief Counsel for Advocacy
U.S. Small Business Administration

Executive Summary

The number of minority-owned firms and their contributions to the American economy have been increasing rapidly over the recent past. Minority business owners more than doubled their share of all firms from 1982 to 1997 and increased shares of employment and receipts.

Within the U.S. Small Business Administration's Office of Advocacy, the Office of Economic Research produces reports on the economic activity of small, minority- and women-owned firms and assesses the impacts of regulation on them. *Minorities in Business, 2001*, reviews the most recent available statistical information on minority-owned firms, their composition, industrial distribution, legal forms of ownership, growth, and turnover. It also looks at socioeconomic characteristics of minority business owners and suggests that while minority participation is vital to the growth of the U.S. economy, significant issues continue to affect the growth of minority-owned businesses. Among the findings of the report are the following:

Demographics

- Of the 281.4 million people in the United States in 2000, 97.6 percent claimed one racial identity, including 75.1 percent White, 12.3 percent Black or African American, 3.6 percent Asian, 0.9 percent American Indian and Alaska Native, 0.1 percent Native Hawaiian and other Pacific Islander, and 5.5 percent other races.
- Another 2.4 percent—more than 6.8 million people—reported that they were combinations of two or more races.
- Cutting across racial boundaries were more than 35.3 million people—12.5 percent of the population—who claimed Hispanic or Latino ethnicity.
- Of the total U.S. minority population in 2000, 40.6 percent were Hispanic, 39.0 percent Black, 12.3 percent Asian, and 2.9 percent American Native. Another 17.7 percent of minorities were of other races and 7.9 percent claimed two or more races.
- In 1999, more than half of Asians, Pacific Islanders, Hispanics, and Latinos in the United States were foreign-born, compared with about 10 percent of Whites, Blacks, and American Indians.
- Self-employment as a share of each group's nonagricultural labor force (averaged over the 1991-1999 decade) was White, 9.7 percent; Black or African American, 3.8 percent; American Indian, Eskimo, or Aleut, 6.4 percent; and Asian or Pacific Islander, 10.1 percent.
- Of all the minority and nonminority groups, Asians/Pacific Islanders had the highest rates of higher education.
- Of White households, 15 percent had income of \$95,000 or more in 1999; 29 percent had income below \$25,000. The comparable numbers for various other groups were as follows: Asian or Pacific Islander, 23 percent and 24 percent; Black, 7 percent and 45 percent; and American Indian, Eskimo and Aleut, 6 percent and 43 percent.

Composition of Minority-Owned Businesses

- Of U.S. businesses, 5.8 percent were owned by Hispanic Americans, 4.4 percent by Asian Americans, 4.0 percent by African Americans, and 0.9 percent by American Indians.

- Of minority-owned businesses 39.5 percent were Hispanic-owned, 30.0 percent Asian-owned, 27.1 percent Black-owned, and 6.5 percent American Indian-owned.
- Business density is the number of individuals in the population divided by the number of businesses in the population—the lower the number, the higher the density. Business density was 10.1 for nonminorities, 11.7 for Asians and Pacific Islanders, 12.6 for American Indians and Alaska Natives, 29.4 for Hispanics, and 42.1 for Blacks. Among Asians, Koreans had the highest business density, “other Pacific Islanders” the lowest. Among Hispanics, Spaniards had the highest, Puerto Ricans the lowest.
- Nonminority-owned firms generated \$92,706 in receipts per nonminority person in the population; the comparable numbers were \$28,842 for Asians/Pacific Islanders, \$13,871 for American Natives, \$5,276 for Hispanics and \$2,055 for Blacks in 1997.

Contributions of Minority-Owned Businesses

- Of the 4,514,699 jobs in minority-owned businesses in 1997, 48.8 percent were in Asian-owned firms, 30.8 percent in Hispanic-owned firms, 15.9 percent in Black-owned firms, and 6.6 percent in American Native-owned firms.
- Minority-owned firms had about \$96 billion in payroll in 1997. The average payroll per employee was roughly \$21,000 in the major minority groups and ranged from just under \$15,000 to just over \$27,000 in various subgroups of the minority population.

Growth of Minority-Owned Businesses

- The minority-owned business share of U.S. firms was 6.8 percent in 1982; it grew steadily to 9.3 percent in 1987, 12.5 percent in 1992, and 14.6 percent in 1997.
- Growth in the number of Hispanic- and Asian-owned businesses tracks growth in these populations over the period. Some of the growth in businesses owned by African Americans, American Indians, and Alaska Natives may be rooted in educational improvements and government policies designed to curb poverty and promote minority business ownership.

Business Turnover in Minority-Owned Firms

- Of all businesses with employees that started in 1992 and had positive payrolls, 47 percent survived until at least 1996. The survival rates were 50.4 percent for new businesses owned by Asians and other minorities, 48.7 percent for White non-Hispanic-owned businesses, 44.9 percent for White Hispanic-owned businesses, and 34.7 percent for new Black-owned businesses.

Government Programs Promoting Minority-Owned Businesses

- Based upon the average of annual data for the 1990-2000 period, minority groups received the following shares of the dollar value of 7(a) loans from the U.S. Small Business Administration: Asian-owned firms, 12.2 percent; Hispanic-owned firms, 5.1 percent; African-American-owned firms, 2.8 percent; and Native-American-owned firms, 0.6 percent.
- Minority-owned businesses in the 8(a) program received 2.7 percent of federal contract dollars in FY 2000.

Introduction

Just as women are playing a more and more important role in American business, minority-owned businesses have become a fast-growing segment of the U.S. economy. The minority-owned business population grew dramatically over the 1980s and 1990s, more than doubling their share of U.S. firms from less than 7 percent in 1982 to almost 15 percent by 1997.¹ This companion study to *Women in Business, 2001*, looks at the demographics of American minority groups, then offers observations about minority-owned businesses: their composition, contributions, industry characteristics, legal forms, sizes, growth, and turnover.

The term “minorities” refers here to both race (grouped by, for example, White, Black, or Asian) and ethnicity (including, for example, groupings for White Hispanic and White non-Hispanic). Major race and ethnic groupings, dictated largely by the availability of Census data, include White, Black or African American, American Indian and Alaska Native, Asian and Pacific Islander, and Hispanic. Data limitations preclude providing information for every group on every variable.

Minorities in Business, 2001 is primarily a report on available data; it is not an academic research or policy study.² Reviewed here are characteristics of businesses owned by minorities and nonminorities, and of businesses owned by various racial and ethnic groups.

Demographics

The Minority Population

Of the 281.4 million people in the United States in 2000, 97.6 percent claimed one racial identity, including 75.1 percent White, 12.3 percent Black or African American, 3.6 percent Asian, 0.9 percent American Indian and Alaska Native, 0.1 percent Native Hawaiian and other Pacific Islander, and 5.5 percent other races (Table 1).³ Another 2.4 percent—more than 6.8 million people—reported that they were combinations of two or more races.

Cutting across racial boundaries were more than 35.3 million people—12.5 percent of the population—who claimed Hispanic or Latino ethnicity. According to estimates in the March 2000 Supplement of the Current Population Survey (CPS), 95 percent of Hispanics and Latinos were White, 3.3 percent Black, 1.1 percent American Indian and Alaska Native, and 0.6 percent Asian and Pacific Islander.

¹ Measurement of minority business ownership has changed since 1982. When data are adjusted to include only those groups covered in 1982, the 1997 minority business share is 15.1 percent. See Appendix 1.

² For instance, “Race and Gender in the Labor Market,” by Joseph G. Altonji and Rebecca M. Blank (in the 1999 *Handbook of Labor Economics*) reviewed the hypothesis that group differences in earning, occupations, and employment patterns are the consequence of preferences and skill differences. Ethnic patterns, if any, of earning, income, work experience, and education are examined here briefly, especially with respect to patterns of business ownership and performance.

Citizenship Status

Since before the United States became a nation, the North American continent has been a magnet for people of many other continents; today, the people of the United States are a mixture of native peoples, earlier immigrants, and new immigrants from every nation.⁴ For many immigrants, the “American Dream” has included the ownership of a small business that will serve as a gateway to America’s economic mainstream. In a society with constitutionally protected freedoms, Americans old and new have created the most vibrant entrepreneurial economy in the world. They take the risks necessary to create jobs, develop innovative products, and introduce new business practices into the marketplace.

⁴ In labor economics and macroeconomics, immigration is considered an important source of human capital contributing to the host country’s economic growth. Among many others, George J. Borjas (1999), “The Economic Analysis of Immigration,” in the *Handbook of Labor Economics*, Volume 3 and Robert J. Barro and Xavier Sala-I-Martin (1995), *Economic Growth*, provide empirical and theoretical analysis on the subject.

Many of the most recent U.S. immigrants are Asians, Pacific Islanders, Hispanics, or Latinos (Table 2).⁵ In 1999, 20.7 percent of Asians and Pacific Islanders were “native”—born in the United States or abroad of American parents, while 45.0 percent were foreign-born naturalized U.S. citizens and another 34.4 percent were foreign-born noncitizens. Similarly, in 1999, 54.5 percent of Hispanics and Latinos (including 18.5 percent foreign-born U.S. citizens and 36.0 percent foreign-born noncitizens) were born outside of the United States; the remaining 45.5 percent were native-born U.S. citizens.

Of the other three major minority groups—White; Black or African American; and American Indian, Eskimo, or Aleut—roughly 90 percent were native citizens born in the United States or abroad of American parents and about 10 percent were first-generation immigrants. African Americans were least likely to be new immigrants (8.8 percent).

Minorities in the Labor Force

About 141 million people were in the American labor force in 1999 (Table 3).⁶ About 118 million (83.5 percent) were White, 17 million (11.8 percent) Black, 5 million (3.9 percent) Asian or Pacific Islander, and 1 million (0.9 percent) American Indian, Eskimo or Aleut. Asians and Pacific Islanders had the highest labor force participation rates. Among the minority groups, American Indians and Alaska natives had the largest share unemployed and looking for work—almost 9 percent were in this situation.

Education is one of the most important factors in economic growth, according to many economists.⁷ The American labor force is well educated on the whole, but average education levels vary by minority group (Figure 1). Asians and Pacific Islanders were most likely (69 percent) to have college or higher degrees; corresponding figures for other groups were White, 53 percent; Black or African American, 44 percent; American Indian, Eskimo, or Aleut, 43 percent; and Hispanic or Latino, 30 percent.

Work Experience and Earnings

Of three subsets of the nonagricultural sector—self-employment, other private sector employment, and government—most Americans—about 72 percent, worked in the private sector outside of self-employment in 1999 (Table 4). Another 12 to 20 percent worked in

⁵ The data here include only householders; all other family members are excluded. This was done to capture only characteristics of the adult population, including business owners or business operators.

⁶ See U.S. Department of Commerce, Bureau of the Census, *Current Population Survey, March Supplement 2000*. The labor force discussed here consists of four groups: employed at work, employed—absent, unemployed on layoff, and unemployed looking for a job.

⁷ Paul M. Romer’s “Increasing Return and Long-Run Growth,” *Journal of Political Economy*, 94, October 1986, 1002-1037, initiated a wave of new research on economic growth. This so-called endogenous growth theory virtually credits human capital and the spillovers of knowledge across producers as the cause of continuous economic growth. Among many others, David Card (1999), “The Causal Effect of Education on Earnings,” in *Handbook of Labor Economics*, Volume 3, offers explanations about the importance of education in earnings.

Table 2. Citizenship Status of the U.S. Population (Percent), 1999

Category	White	Black or African American	American Indian, Eskimo, Aleut	Asian or Pacific Islander	Hispanic or Latino	Total
Native, Born in the United States	88.1	90.8	88.5	16.5	38.0	86.0
Native, Born in Puerto Rico or U.S. Outlying Area	0.7	0.6	0.4	1.2	5.9	0.7
Native, Born Abroad of American Parent(s)	0.7	0.3	1.4	3.0	1.6	0.8
Foreign Born, U.S. Citizen by Naturalization	4.4	4.0	5.5	45.0	18.5	5.8
Foreign Born, Not a Citizen of the United States	6.0	4.4	4.2	34.4	36.0	6.8

Note: Including Hispanic or Latino as a category results in a double count because Hispanic is an ethnicity that overlaps racial groups. Because 95 percent of Hispanics or Latinos are White, the major double count occurs when White is one of the categories; it is minor in conjunction with the other three racial groups.

government. Self-employment rates ranged from 4.5 percent of Blacks to 9.6 percent of Asians or Pacific Islanders. However, Blacks have increased their self-employment rate since 1991, whereas the rate of self-employment has dropped for Whites, American Natives, and Asians and Pacific Islanders.

Self-employment was the major earning source for about the same shares of Whites and Asians—6.4 to 6.5 percent (Table 5). A smaller but growing share of African Americans (3.4 percent) relied on self-employment for their income in 1999.

Minority Households and Income Levels

All groups had similar shares of households at the middle income levels (Table 6 and Figure 2). However, Blacks, American Indians, and a group that crosses racial boundaries, Hispanics, had larger shares at lower income levels. Asians and Whites had larger shares at higher income levels.

Minority-Owned Businesses

Minorities made up about 30.9 percent of the total U.S. population in 2000 but owned just 14.6 percent of all U.S. businesses in 1997.⁸ Of the 20.8 million U.S. firms in 1997, 1,199,896 were owned by Hispanics, 912,960 by Asians and Pacific Islanders, 823,499 by

⁸ U.S. Department of Commerce, Bureau of the Census, Survey of Minority-Owned Business Enterprises (SMOBE) 1982, 1987, 1992 and 1997. With technical assistance from the Bureau of the Census, the Office of Advocacy compiled the four volumes of data and included C corporations for the first time in the 1997 SMOBE. To make the data comparable, however, C corporations will be excluded from multi-year comparisons of SMOBE data. Note that population figures used here are for 2000 and firm figures for 1997: the different years of data will create some distortions in comparisons.

Table 5. Major Earning Sources of the U.S. Nonagricultural Work Force by Race, 1991-1999 (Percent)

Year	Wage and Salary				Self-Employment			
	White	Black	American Indian, Eskimo or Aleut	Asian or Pacific Islander	White	Black	American Indian, Eskimo or Aleut	Asian or Pacific Islander

Blacks, and 197,300 by American Indians and Alaska Natives (Table 7). Blacks and Hispanics were underrepresented in the minority business population: Hispanic Americans counted for about 12.5 percent of the population in 2000, but owned only 5.8 percent of U.S. firms in 1997, while Blacks or African Americans constituted 12.3 percent of the U.S. population but only 4.0 percent of business owners. Asians and Native Americans, on the other hand, had business representation equal to or broader than their numbers in the population would suggest: American Indians and Alaska Natives composed 0.9 percent of the population and 0.9 percent of businesses, while Asians and Pacific Islanders constituted 3.6 percent of the population and 4.4 percent of businesses.

Source: U.S. Department of Commerce, Bureau of the Census, SMOBE, 1997.

Business density is the number of individuals in the population divided by the number of businesses in the population—the lower the number, the higher the density. Business density was 10.1 for nonminorities—that is, there was a nonminority-owned business for every 10.1 people in the nonminority population (Table 8).⁹ In the minority population, business density was 12.6 for American Indians and Alaska Natives, 11.7 for Asians and Pacific Islanders, 29.4 for Hispanics, and 42.1 for Blacks. Business sales per person in the population totaled \$92,706 per nonminority person, \$28,842 for Asians and Pacific Islanders, \$13,871 for American Indians and Alaska Natives, \$5,276 for Hispanics, and \$2,055 for Blacks.

Hispanic-Owned Businesses by Ethnicity

Hispanics or Latinos of any race in the United States made up 12.5 percent of the total population and 40.6 percent of the total minority population in 2000 and owned 5.8 percent of all U.S. business firms and 39.5 percent of all minority-owned firms (Tables 1 and 9). More than 1 million Hispanic-owned businesses existed in the United States in 1997, of which 39.3 percent were owned by Mexicans, 23.9 percent by Hispanic Latin Americans, 10.4 percent by Cubans, 5.8 percent by Puerto Ricans, 4.8 percent by Spaniards, and 15.7 percent by other Spanish, Hispanic, or Latino business owners. Business density or business participation was at 29.4 Hispanic members of the population per business. Spaniards, Cubans, and Hispanic Latin Americans were strongly represented in the business population compared with other Hispanic and Latino groups (Table 10). Business sales and receipts per member of the Hispanic/Latino population also ranged widely from a record high of \$159,775 per Spaniard to \$2,201 per Puerto Rican in the population. The low share of Spaniards in the Hispanic population—0.3 percent—may be part of the explanation for the large disparity in the data.

Asian-Owned Businesses by Ethnicity

Asians and Pacific Islanders in the United States made up 3.6 percent of the total population and 12.3 percent of the total minority population in 2000, and owned 4.4 percent of all U.S. business firms and 30.0 percent of all minority-owned firms in 1997 (Tables 1 and 11). Of 912,959 Asian and Pacific Islander-owned businesses in 1997, Chinese business owners owned 27.7 percent; Asian Indians, 18.3 percent; Koreans, 14.9 percent; Vietnamese, 10.7 percent; Japanese, 9.4 percent; Filipinos, 9.3 percent; Hawaiians, 1.7 percent; other Asians, 7.8 percent; and other Pacific Islanders, 1.7 percent (Table 11).¹⁰ Business density rates averaged 11.7 for all Asian businesses, higher than the national average of 13.5 (Table 12). By Asian ethnic group, the rates ranged from strong representation in the business population by Koreans, at 7.9, to a much lower participation rate for other Pacific Islanders at 67.5. Business sales and receipts per member of the population ranged widely among ethnic groups, from Japanese at \$54,903 to Filipino at \$5,987.

⁹Business density is calculated here using population figures for 2000 and firm figures for 1997. The different years of population and firm data will create some distortion in this approximate figure.

¹⁰ Other Asian includes other Asian alone, or two or more Asian categories.

Economic Contributions of Minority-Owned Firms

Like other businesses, minority-owned businesses produce goods and services, create innovations, absorb labor and generate jobs, provide wages and salaries, and contribute to the support of government services through taxes. All of these business activities are important contributions to the dynamic American economy.¹¹

¹¹ Milken Institute points out that “minority communities represent the most potent potential market in the American economy. Minority groups are experiencing higher rates of population growth than whites. By 2050, minorities are projected to comprise almost 50 percent of the U.S. population. Minority businesses are growing even faster than the population in terms of both numbers of new firms and revenues.” (See February 1999 Milken Institute Policy Brief.)

In 1997, 615,222 minority-owned firms with paid employees had 4,514,699 workers and provided payroll of about \$95.5 billion (Table 7). Of all employees hired by minority-owned firms, 48.8 percent were in Asian-owned firms, 30.8 percent in Hispanic-owned firms, 15.9 percent in Black-owned firms and 6.6 percent in American Native-owned firms. Asian-owned firms contribute 48.3 percent of total minority business payroll; Hispanic-owned firms, 31.2 percent; Black-owned firms, 15.0 percent; and American Native-owned firms, 6.9 percent.

Most U.S. firms are small; only 25.4 percent of firms had paid employees in 1997 (Table 13). Nearly one-third—31.8 percent—of Asian-owned firms had paid employees; smaller shares ranging from 11.3 percent to 17.7 percent of other minority-owned businesses had paid employees. On average, each nonminority-owned firm with paid employees employed 21 workers in 1997. The employment numbers in minority-owned firms with paid employees were smaller, ranging from 7 to 9 on average. Payroll per employee in 1997 averaged \$28,742 in nonminority-owned firms and ranged between about \$20,000 and \$23,000 in minority-owned firms.

Contributions of Hispanic-Owned Firms, by Ethnicity

The 211,885 Hispanic-owned firms with paid employees in the United States had 1,388,746 workers and provided about \$29.8 billion in payroll in 1997 (Table 9). Half of employees hired by Hispanic-owned firms were in firms owned by Mexican or Mexican-American business owners; between 10 and 17 percent each were in Hispanic Latin American-, Cuban-, and Other Spanish, Hispanic, Latino-owned firms; and about 5 percent each were in firms owned by Spanish and Puerto Rican business owners. Each ethnic group contributed similar shares of payroll.

Most Hispanic-owned firms are small; just 17.7 percent had paid employees in 1997 (Table 14). By ethnic group, the share of firms that had employees ranged from about 13.0 percent of “other Hispanic, Spanish, Latino-owned firms” to 24.1 percent of Cuban-owned firms. Hispanic-owned employer firms had about 7 workers per firm in 1997. The average payroll per employee was \$21,480. Among Hispanic-owned firms, those owned by Spaniards provided the highest average payroll, \$26,798; Mexican-owned firms had the most employees per firm, but paid the lowest, \$18,717.

Contributions of Asian-Owned Firms, by Ethnicity

The 290,000 Asian-owned firms with paid employees employed 2,203,080 and provided about \$46.1 billion in payroll (Table 11). Of employees hired by Asian-owned firms, 31.40 percent were in Chinese-owned firms, 22.3 percent in Asian Indian-owned firms, 15.1 percent in Korean-owned firms, 11.9 percent in Japanese-owned firms, 9.2 percent in Other Asian-owned firms, 5.0 percent in Filipino-owned firms, 3.6 percent in Vietnamese-owned firms, 0.9 percent in Hawaiian-owned firms, and 0.6 percent in Other Pacific Islander-owned firms. Payroll was distributed similarly by ethnicity.

Asian firms are small, although larger, on average, than Hispanic-owned firms: 31.8 percent had paid employees in 1997 (Table 15). Asian Indian-, Korean -, and Chinese-owned firms were larger, on average: their employer shares were 40.3 percent, 36.9 percent, and 35.9 percent, respectively. Asian-owned firms with paid employees had 7 employees, on average, in 1997. The employment numbers varied by Asian ethnicity from 13 in other Pacific Islander-owned firms to 4 in Vietnamese-owned firms. Four Asian ethnic groups—Japanese at \$27,102; Asian Indian, \$25,652; Filipino, \$24,220; and Hawaiian, \$24,058—paid more than the \$23,070 average for Asian-owned firms.

Sizes of Minority-Owned Firms

Most minority-owned businesses have no employees, including 89 percent of Black-owned businesses, 83 percent of American Indian- and Alaska Native- owned, 82 percent of Hispanic-owned, and 68 percent of Asian- and Pacific-Islander-owned firms. Of firms with paid employees, almost all had fewer than 100 employees: 98.1 percent of those owned by nonminorities and about 99 percent of those owned by the various minority groups (Table 16).

*"No Employees" refers to firms reporting annual payroll that did not report employees on their payroll during the specified period in 1997.
Source: The Office of Advocacy based on US Census Bureau 1997 Economic Census, Survey of Minority-Owned Business Enterprises.

Of minority-owned firms with fewer than 100 employees, about 47 percent were owned by Asians or Pacific Islanders, about 35 percent by Hispanics, about 15 percent by Blacks and about 6 percent by American Indians and Alaska natives. Shares of firms with more than 100 employees were similar, although Blacks and American natives were more strongly represented in the larger firms. (Table 16).

Measured by receipts size, Black-owned businesses in particular were much more likely to be small: Black-owned firms constituted more than 30 percent of the minority-owned firms earning less than \$25,000 in receipts, but just 10 percent of those earning \$500,000 or more (Table 17). Hispanic and American Native-owned firms also had somewhat larger shares of the firms in the smaller receipts size categories. Asian-owned firms, on the other hand,

represented about 22 percent of the minority-owned firms with less than \$25,000 in receipts, but more than 54 percent of those with receipts of \$500,000 or more.

Legal Forms of Ownership

Minorities make various choices of legal forms for their businesses. Of all U.S. businesses, 72.6 percent are individual proprietorships, 11.5 percent are C corporations, 9.5 percent are S corporations, 5.9 percent are partnerships, and .5 percent are other (Table 18). All minority groups except Asians were much more likely than average to choose the proprietorship form of organization, doing so more than 85 percent of the time. They were less likely to choose any of the other forms. Asians were an exception, being slightly less likely than average to form a proprietorship and more likely to incorporate: 71.0 percent of Asian-owned businesses were sole proprietorships, but 14.0 percent were C corporations and 10.2 percent were S corporations.

Probably because most new and small businesses are sole proprietorships, this form of ownership has been observed to have higher proportions of business closure and low business income. Higher proportions of sole proprietorships in the Hispanic, American Native, and Black business communities have lower average business receipts and lower shares of firms with paid employees (Tables 7 and 13).

Industry Divisions

Minority-owned firms were well represented in many major industries in 1997 (Table 19). At the national level, the largest proportion (42.7 percent) of businesses were in the services

industry, followed by retail trade (14.0 percent), construction (11.2 percent) and finance, insurance, and real estate (10.8 percent).

Hispanic-owned businesses were distributed much like the average business distribution in most major industries, except mining, and finance, insurance, and real estate. Black-owned firms tended to be concentrated in the transportation, communications and public utilities and service sectors. A large share of American Indian-owned businesses were in the “unclassified” category.¹² American Indian-owned firms were also concentrated in agricultural, construction and manufacturing industries. Asian- and Pacific-Islander-owned firms tended to be engaged in greater than average proportions in retail and wholesale trade and services.

¹² The unclassified category may reflect a large proportion of businesses in gambling. For figures, see <http://www.indiangaming.org/library/index.html>.

Geographic Distribution

Not surprisingly, minority-owned businesses are most prevalent in the southern states and in urban areas where minority populations tend to be larger. In 1997, California, Florida, Texas, New Mexico, Hawaii, Maryland, and the District of Columbia all had concentrations of minority-owned businesses exceeding 20 percent (Figure 3). In sheer numbers, New York had the largest number of Black-owned businesses—more than 86,000; Hawaii had the largest number of businesses owned by Pacific Islanders—nearly 7,000; and California had the largest numbers of minority-owned businesses owned by Hispanics (336,000), Asians (313,000), and American Indians (27,000) (Table A.5).

The Growth of Minority-Owned Businesses

The number of minority-owned businesses has grown explosively since 1982 (Table 20). Fewer than 7 percent of U.S. firms were minority-owned in 1982 (Figure 4). Minority-owned firms' share more than doubled to almost 15 percent in 1997.¹³ Minority-owned firms increased at rates between three and seven times those of nonminority-owned firms, by 55 percent from 1982 to 1987, 68 percent between 1987 and 1992, and 30 percent from 1992 to 1997.

One reason for minority-owned firm growth is simply the rate of minority population growth. The small growth rates of nonminority-owned firms match the low growth rates of the nonminority population for the three quinquennial periods (Figure 5).¹⁴ For the same periods, the rapid growth rates of minority-owned firms parallel growth rates in the minority population, particularly for Hispanics and Asians and Pacific Islanders, whose population growth was on average four times the total U.S. population growth rate.¹⁵ There are many reasons for the growth in minority-owned businesses, but at least some of the increase may also be credited to long-term efforts to encourage minority business growth through various initiatives at all levels of government.¹⁶

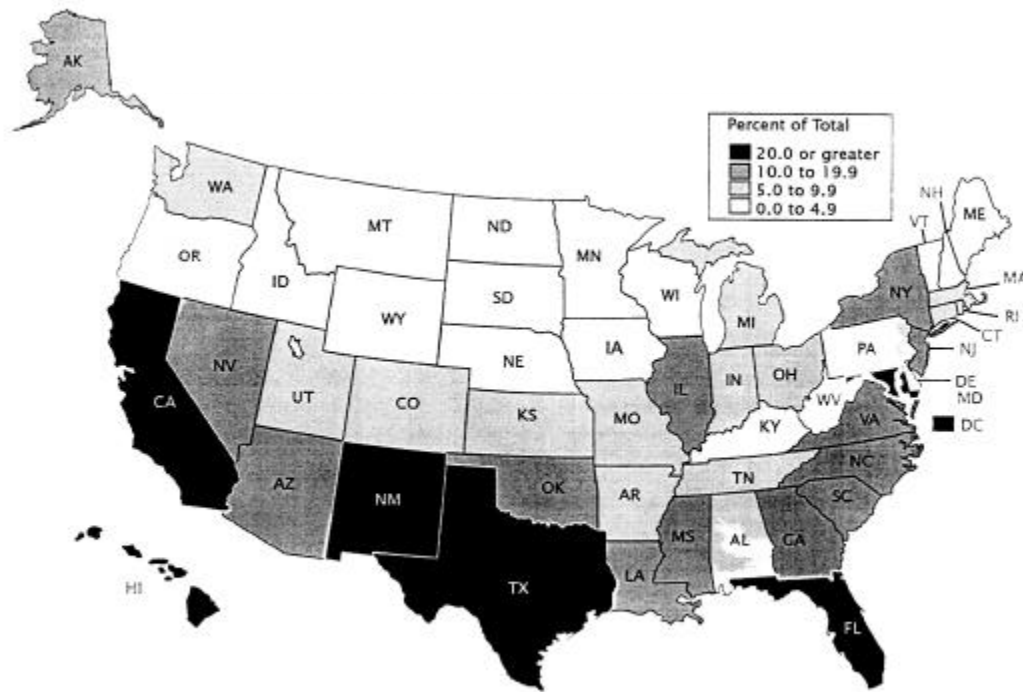

¹³ Changes in the Survey of Minority-Owned Business Enterprises (SMOBE) database over the years have made comparisons difficult. When data are adjusted to include only those groups covered in 1982, the 1997 minority business share is 15.1 percent (Figure 4). See Appendix 1 for a description of the SMOBE database.

¹⁴ Population data from U.S. Department of Commerce, Bureau of the Census, *The National Data Book, Statistical Abstract of the United States 1998*.

¹⁵ This average was determined by first calculating for each minority group the growth rate relative to all U.S. population growth. For example, the Hispanic population grew at five times, four times, and four times the U.S. population growth rates during the three quinquennial periods. These figures average to four.

¹⁶ For example, the government-wide procurement preference goaling program requires agencies to award 23 percent of prime contracts to small businesses; 5 percent of prime and subcontracts to small disadvantaged businesses; 5 percent of prime and subcontracts to women-owned small businesses; increasing percentages from 1 percent to 3 percent of prime contracts to HUBZone small businesses for FY 1999 through FY 2003 and ongoing; and 3 percent of prime and subcontracts to service-disabled veteran-owned small businesses (see <http://www.sba.gov/GC/whatwedo.html>).

Table 20. Growth in Numbers of Minority-Owned Firms, 1982-1997¹

	Number of Firms				Growth Rates (Percent)		
	1982	1987	1992	1997	1982-1987	1987-1992	1992-1997
All U.S. Firms	12,059,950	13,695,480	17,253,143	18,431,456	14	26	7
Nonminority-Owned Firms	11,234,999	12,419,170	15,103,959	15,645,358	11	22	4
All Minority-Owned Firms	824,951	1,343,910	2,149,184	2,786,098	55	68	30
Black-Owned Firms	308,260	424,165	620,912	780,770	38	46	26
Hispanic-Owned Firms	284,011	489,973	862,605	1,121,433	73	76	30
American Indian and Alaskan Native-Owned Firms	17,100	24,931	102,271	187,921	46	310	84
Asian, and Pacific Islander-Owned Firms ²	240,806	414,340	603,426	785,480	72	46	30

¹Estimated undercounts have been included to illustrate trends believed reliable at the all firm level. Estimates are based on a large ample mailout designed to measure the undercoverage of Hispanic and Asian firms of firms not identified by race code or surname.

²Undercounts for Asians and Pacific Islanders, American Indians and Alaskan Natives are estimated based on total undercounts for the combined categories.

Source: U.S. Small Business Administration, Office of Advocacy, based on data from the U.S. Department of Commerce, Bureau of the Census, Survey of Minority-Owned Business Enterprises, Company Statistics Series 1982, 1987, 1992, and 1997.

Figure 4 Growth in the Minority-Owned Business Population, 1982-1997

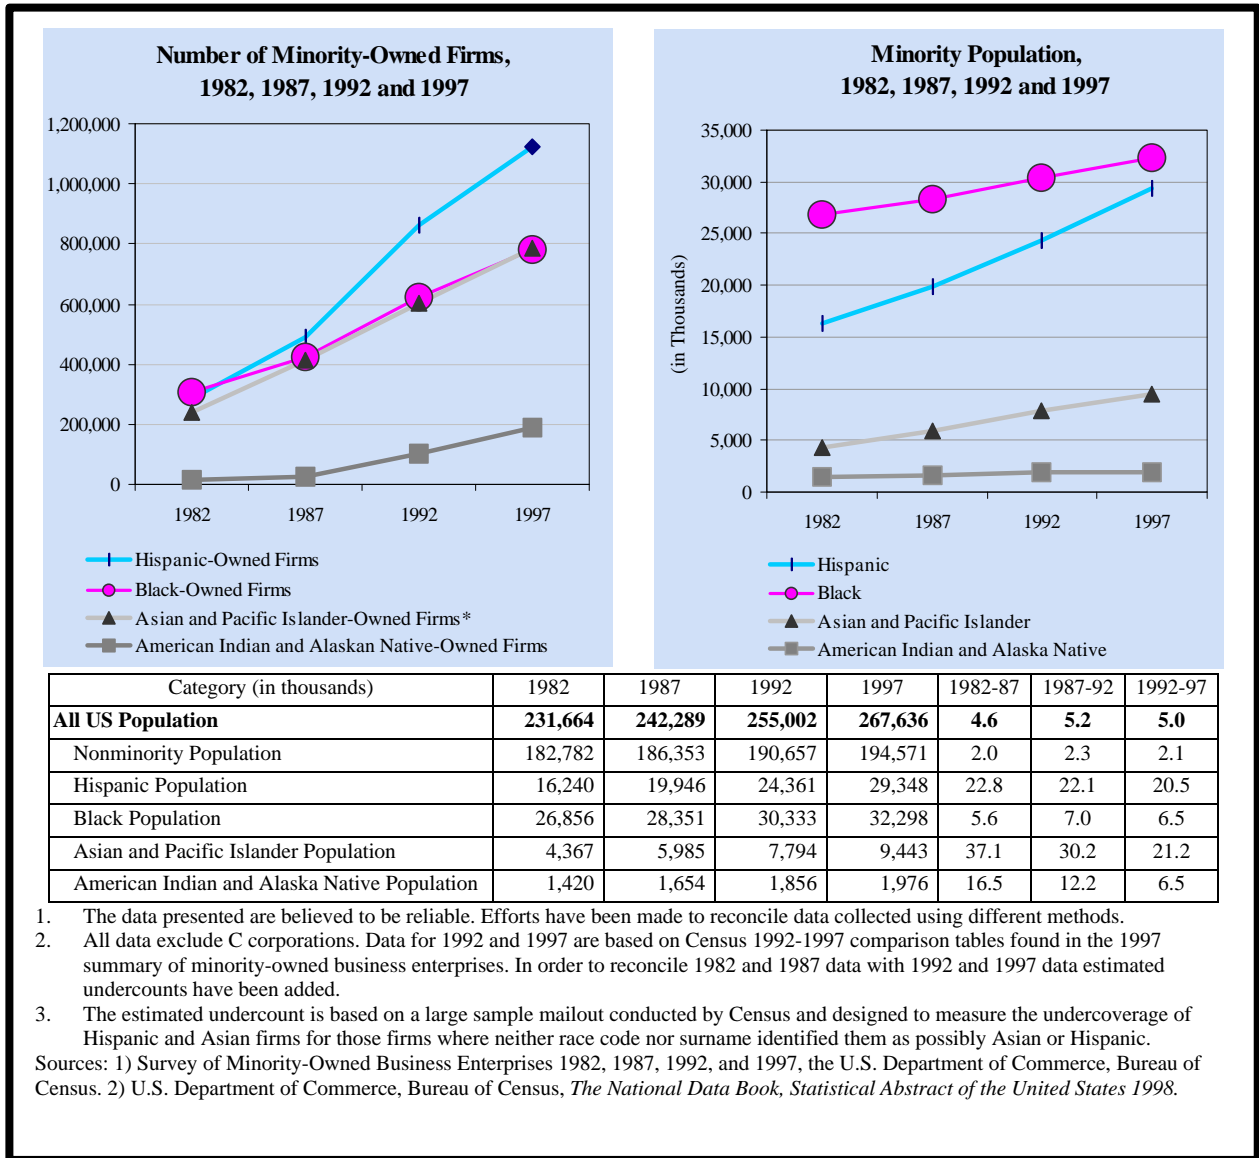

The rapid business growth occurred across minority groups (Table 20). Black-owned businesses increased their numbers by 38 percent from 1982 to 1987, by 46 percent from 1987 to 1992, and by another 26 percent from 1997 to 1992. The quinquennial growth rates for Hispanic-owned businesses were 73 percent, 76 percent, and 30 percent. Asian and Pacific Islander-owned businesses increased by 72 percent, 46 percent, and 30 percent over the three periods. The most striking percentage increases were in businesses owned by American Indians and Alaska Natives, which grew at about nine times the rate of U.S. firms overall. It is estimated that, excluding C corporations, the number of American Indian- and Alaska Native-owned businesses rose 47 percent from 1982 to 1987, 310 percent from 1987 to 1992, and 84 percent from 1992 to 1997.

The astonishing growth in American Indian and Alaska Native-owned firms, especially the 310 percent increase over the 1987-1992 period, appears to reflect strong growth starting from a relatively small base of firms. The growth may be attributable, at least in part, to specific government policies supporting business growth. The 1988 Indian Gaming Regulatory Act (IGRA) made it possible for federally recognized tribes to legally run casinos on Indian lands. The 1987-1992 period covers firm growth starting one year before IGRA's enactment and continuing through the first years after enactment. The growth of American Indian and Alaska Native-owned businesses deserves further close examination.

In the African American community, business growth exceeded population growth over the three quinquennial periods. The faster growth in Black-owned businesses may reflect increased opportunity, greater equality, better education, and direct governmental policies targeting social and economic disadvantage and discrimination. Strong activism for greater equality helped end segregationist policies in the government contracting process as early as

Figure 5. Minority-Owned Businesses and the Minority Population, 1982-1997

1941.¹⁷ The civil rights movement of the 1950s and 1960s moved the African American community toward greater equality in many other aspects of society. An entrepreneurial focus emerged in the 1970s, and the number of Black-owned firms increased by 47 percent over the 1977-1982 period. After the 1972 enactment of anti-discrimination provisions with respect to education, a strong focus on improving education within the African American community and concomitant efforts to increase minority education by the U.S. government helped raise education levels, further supporting increases in entrepreneurship and business activity in the

¹⁷ In 1941, efforts of African-American trade unions and individuals such as trade union leader A. Phillip Randolph to defeat segregation helped lead to President Franklin D. Roosevelt's signing of Executive Order 8802, which outlawed segregationist hiring policies by defense industries in the federal contracting process.

Black community.¹⁸ Other government policies such as the 1978 Small Business Act supported equal opportunity in the marketplace.¹⁹

Minority Business Turnover

Lack of financial capital is one of many impediments to the survival of small firms and minority-owned firms in particular. The SBA's Office of Advocacy sponsored a study that examined minority business turnover and the reasons for it, using a database of firms with employees that started in 1992.²⁰ Forty-seven percent of the businesses with positive payrolls that started in 1992 survived until at least 1996. The survival rate for new White non-Hispanic-owned businesses was 48.7 percent. For new Black-owned businesses, it was 34.7 percent and for new White Hispanic-owned businesses it was 44.9 percent. For businesses started by Asians and other minorities, the survival rate was 50.4 percent.

The study also examined, for each nonminority and minority group, the top five industries in terms of 1992-1996 survival rates (Table 21). The highest survival rate by industry was almost 82 percent for White non-Hispanic businesses in the oil and gas extraction industry, and the highest rates by industry for minority-owned businesses ranged from 79.1 percent for Black-owned businesses in legal services to 65.6 percent for White Hispanic-owned business in health services. The fifth highest survival rate by industry was in the mid-50s range for all minority groups, whereas for White, non-Hispanic-owned businesses the fifth highest rate was near 70 percent.

The industries with the highest survival rates among minority-owned businesses are generally service-producing industries—industries where entry costs tend to be lower than in goods-producing industries. In contrast, for White non-Hispanic-owned businesses, the industries with the highest survival rates are considerably more capital-intensive. As a general proposition, this is probably a manifestation of systematic racial/ethnic differences in the industrial distribution of businesses. The fact that minority-owned businesses tend to be more prevalent in industries with lower entry costs may—at least in part—reflect more binding liquidity constraints and generally less access to startup capital among prospective minority business owners.

¹⁸ In addition, private sector efforts through organizations such as the National Foundation for Teaching Entrepreneurship have played an important role in entrepreneurial education in minority and nonminority communities.

¹⁹ Among other things, the act required federal agencies to direct “not less than 5 percent” of their contracts to small businesses “owned and controlled by social and economically disadvantaged individuals.”

²⁰ Alicia Robb, while on staff in the Office of Advocacy, matched the Census Bureau's 1992 Survey of Minority-Owned Business Enterprises (SMOBE) and 1992 Women-Owned Businesses survey data with the 1989-1996 Business Information Tracking Series (BITS). The BITS is an annual, longitudinal database containing data on nearly all U.S. businesses and establishments with positive payrolls. As a result of her work, it is now possible to examine a wide variety of longitudinal inquiries over the 1992-1996 time period by gender, race, and/or ethnicity of business ownership. See Richard Boden, “Analyses of Business Dissolution by Demographic Category of Business Ownership,” unpublished report prepared for the Office of Advocacy of the U.S. Small Business Administration, Washington, D.C., December 2000.

Table 21. Top Five Major Industries in Business Survival Rates by Ethnicity, 1992-1996

<i>Major Industry Name</i>	<i>SIC Code</i>	<i>Survival Rate (Percent)</i>
<i>White, Non-Hispanic-Owned</i>		
Oil and Gas Extraction	13	81.69

Business Services	73	59.90
Wholesale Trade – Durable Goods	50	57.90
<p>* Note: Data pertain exclusively to new (in 1992) firms (employer identification numbers or EINs) with positive payrolls in 1992. Also, in order to be included in this tabulation, a major industry must have had at least 50 new firms (EINs) in 1992. Source: Special tabulations of 1992-1996 Business Information Tracking Series (BITS) data matched with 1992 SMOBE and WOB data. This merged data series was created by Dr. Alicia Robb of the Federal Reserve Board of Governors while she was employed by the Office of Advocacy of the U.S. Small Business Administration.</p>		

Government Programs Supporting Minority-Owned Businesses

Financing Programs

The 7(a) loan guaranty program provides loans to small businesses unable to secure financing on reasonable terms through normal lending channels. The program operates through private-sector lenders that provide loans guaranteed by the SBA; the agency has no funds for direct lending or grants. The number and dollar amounts of 7(a) loans have been increasing rather steadily for all minority groups; they have reached a plateau in the recent past for nonminorities. Asians have received a larger share of dollars than of the number of loans, implying that they have applied for and been awarded larger loans than other groups. On average, minority shares of the number and value of 7(a) loans were as follows: Asian-owned firms, 8.5 percent and 12.2 percent; Hispanic, 6.5 percent and 5.1 percent; African American, 4.2 percent and 2.8 percent; and Native American, 0.8 percent and 0.6 percent (Tables 21 and 22).

The 504 Certified Development Company (CDC) program provides growing businesses with long-term, fixed-rate financing for major fixed assets, such as land and buildings. A certified development company is a nonprofit corporation set up to contribute to the economic development of its community. The dollar value of 504 loans has fluctuated from year to year (Table 24). The share of the value of 504 loans won by the various minority groups is similar to their shares of 7(a) loans (Table 25).

Federal Procurement Programs

By law, U.S. federal agencies are required to provide small and women-owned businesses and small business owned or controlled by socially and economically disadvantaged individuals the “maximum practicable opportunity” to participate in federal contracts for good and services.

The law sets a government-wide goal of 5 percent of the total dollar value of all federal prime and subcontracts to be awarded to small business concerns owned and controlled by “socially

and economically disadvantaged individuals.” The value of contracts over \$25,000 awarded to minority-owned businesses has been increasing over the years (Table 26).

The 8(a) program helps small companies owned and controlled by socially and economically disadvantaged individuals obtain federal agency contracts through a certification process carried out by the U.S. Small Business Administration. Under the program, the SBA, which acts as the prime contractor in the process, works with other federal agencies to identify requirements suitable for the 8(a) program. The federal agencies, with SBA assistance, then negotiate subcontracts with certified 8(a) program participants. The 8(a) share of total contract actions increased significantly from 1.5 percent in fiscal year (FY) 1984 to a high of 3.7 percent in FY 1995 and 1996, then dropped to 2.7 percent in FY 2000 (Table 27). From FY 1997 to 2000, total dollars in contract actions over \$25,000 kept growing, while dollars in 8(a) contracts declined from \$6.5 billion in FY 1998 to \$6.1 billion in FY 1999 and to \$5.6 billion in FY 2000. The reasons for the decline warrant further examination.

Conclusion

Minorities in Business, 2001, a companion to the Office of Advocacy report, *Women in Business, 2001*, is neither an academic research report nor a policy study, but reviews available data on the contributions, composition, and growth of minority-owned businesses. It is hoped that this data report will stimulate further studies on minority-owned businesses.

The fast growth of Hispanic-owned businesses corresponds with the fast growth of the Hispanic population, and growth is expected to continue in both. Hispanic-owned businesses are well represented in most major industries, but lower levels of education in parts of the Hispanic population may hinder future business development and growth in industries that require high concentrations of human capital. There is a severe business income disparity among Hispanic ethnic groups: Puerto Rican- and Mexican-owned businesses were among the poorest.

Blacks remain the poorest racial group in the United States; they are also the least represented in the U.S. business sector, as seen in measures such as the number of Black-owned businesses, African Americans’ self-employment and business participation rates, and the dollar value of Black-owned business receipts per Black population. Survival rates of new businesses owned by Blacks were the lowest compared with other business groups. African Americans constitute a large proportion of the U.S. minority population, and there is great potential for growth in the Black-owned business community, as well as a continuing need for educational, financial, and other resources.

The significant growth rate of American Indian and Alaska Native-owned businesses may mirror such factors as (1) a low initial rate of business ownership as a starting point; (2) strong and favorable government support; and (3) a significant share of educated individuals in the population. Business income generation might be increased by intensifying the physical and human capital devoted to these businesses and by their further diversification into technology and production-oriented industries.

A large proportion of the Asian community are new immigrants—hard-working, entrepreneurial people in search of the “American Dream.” They are equipped with abundant human capital and substantial business know-how, and they are relatively evenly distributed among income groups. Many Asian-owned firms have paid employees. There is significant potential for ethnic groups such as Filipinos, Vietnamese, other Asians, Hawaiians, and other Pacific Islanders to improve their business earnings.

Appendix 1 Comparability of SMOBE 1982, 1987, 1992 and 1997

The primary source of data used here is the Survey of Minority-Owned Business Enterprises (SMOBE) for 1982, 1987, 1992, and 1997, prepared by the Census Bureau as part of its quinquennial Economic Censuses. The Economic Census first began in 1954 and since 1967 has been conducted every five years. Data may not be comparable between different years because of significant changes in survey methodology. Whenever possible, comparable data have been used and major discrepancies have been noted. Some of the significant differences in the data include the following.

1987

Prior to 1987, surveys included any firm filing a business tax return with business receipts greater than zero. In 1987, only firms with receipts totaling \$500 or more were included in the data. Another change in 1987 was the exclusion of firms filing tax returns other than the IRS 1120S form (for Subchapter S corporations.) This was done to correct problems with prior survey methods that resulted in undercoverage of medium-sized to large minority-owned corporations.

1992

Significant changes between 1987 and 1992 include a change in the classification of firm data. For 1992, classifications were based on the 1987 SIC manual. This manual was updated to better reflect industry trends. For 1987, classifications were based on the 1972 SIC manual. Further, in 1987, processing errors resulted in a significant overstatement of the number of employer firms.

1997

1997 data are not directly comparable to past surveys because of a number of significant changes. Only firms with \$1,000 or more in receipts were included in the 1997 tabulation of minority-owned businesses. C corporations are now included in the data, whereas in the past only Subchapter S corporations, partnerships, and sole proprietorships were included. Another change is in the tabulation of firms with 50 percent minority ownership. Past tabulations of minority-owned businesses included firms with 50 percent minority ownership, while 1997 data include only those with 51 percent minority ownership or more. Jointly owned minority and nonminority firms, where no one single racial/ethnic group has majority ownership, are tabulated separately in the *1997 Economic Census Company Summary* publication as 50 percent minority-, 50 percent nonminority-owned.

The list above includes only a portion of the changes made to survey methodology and should in no way be considered an exhaustive explanation of data comparability.

Appendix 2 Definitions of Groups in the SMOBE

The racial and ethnic categories used in the SMOBE/SWOBE survey are consistent with those mandated by the Office of Management and Budget at the time the survey was conducted. Both the Executive Branch and Congress developed these standards. Respondents in this survey were not given the opportunity to identify themselves as being of two or more races, as was allowed in the 2000 Census of Population and Housing.

American Indian- and Alaska Native-owned businesses are those for which the sole proprietor checked American Indian or Alaska Native on the 1997 or 1992 survey questionnaire or, in the case of firms with multiple owners, where 51 percent or more of stock interest, claims, or rights were held by American Indians or Alaska Natives so determined. The 1992 form further defined the category as persons having origins (ancestry) in any of the original peoples of North America, and who maintain cultural identification through tribal affiliation or community recognition.

Asian- and Pacific Islander-owned businesses are those for which the sole proprietor identified his or her origin as Asian Indian, Chinese, Filipino, Japanese, Korean, Vietnamese, Other Asian, Native Hawaiian, or Other Pacific Islander on the 1997 or 1992 survey questionnaire; or, in the case of firms with multiple owners, where 51 percent or more of stock interest, claims, or rights were held by Asians so determined. The 1992 form further identified the group as persons having origins in any of the original peoples of the Far East, Southeast Asia, the Indian subcontinent, or the Pacific Islands.

Black-owned businesses are those for which the sole proprietor checked "African Am./Black/Negro" on the 1997 survey or "African American/Black/Negro" on the 1992 survey questionnaire or, in the case of firms with multiple owners, where 51 percent or more of stock interest, claims, or rights were held by African Americans so determined.

Hispanic-owned businesses are those for which the sole proprietor identified his or her origin as Cuban, Mexican/Mexican American/Chicano, Puerto Rican, Spaniard, Hispanic Latin American, or Other Spanish/Hispanic/Latino on the 1997 or 1992 survey questionnaire; or, in the case of firms with multiple owners, where 51 percent or more of stock interest, claims, or rights were held by Hispanics so determined. Hispanic origin and race were determined in separate questions and some Hispanic-owned businesses were also counted in race categories included in this report.

Jointly owned businesses refers to businesses with 50 percent minority ownership and 50 percent nonminority ownership

Publicly held, foreign-owned, and not for profit are businesses or organizations for which the primary ownership by a racial, ethnic, or gender category could not be determined.

Total minorities refers to businesses owned by Blacks, Hispanics, Asians, Pacific Islanders, American Indians, and Alaska Natives.

Universe (All Firms) refers to all businesses, without regard to the race, ethnicity, or gender of the business owners.
